### **Disclaimer**

This book presents the author's personal perspectives, interpretations, and exploratory ideas based on independent study and experiential understanding. The content is offered for informational and educational purposes only.

The concepts discussed in this book are not intended to replace or substitute established scientific, medical, psychological, legal, or professional advice. Readers should not rely on this material as a basis for making health, medical, or life decisions without consulting qualified professionals.

Individual experiences, interpretations, and outcomes may vary. The author makes no guarantees regarding results or effects arising from the application of the ideas discussed.

The reader assumes full responsibility for how the information in this book is understood and applied.

## Preface

The information provided in this document is taken from very informal and loosely worded video transcripts. It is based on a magnetic etheric model of the universe. This model isn't just about technology—it's about a different way of understanding how the universe, the planet, and everything around us works. The information comes from experimental data, theoretical insights, and revelatory sources.

This is highly unconventional information. You won't hear these concepts in a college classroom. If you're working in a top-secret facility focused on this technology, you might encounter them—but otherwise, this is outside conventional science. If you believe everything you learned in college physics textbooks is the final truth, I invite you to at least consider the possibility that much of it may not be. Yes, it may sound weird now, but hopefully in a few years it won't be quite so weird. If it weren't for the incredible suppression of technology over at least the last hundred years—actually much longer—we'd already be doing all of this out in the open. It would be normal, not something hidden away. And now it's just a matter of governments and corporations allowing it for public use.

You may not agree with everything here, and that's okay. I still have to get this out because the urgency of what's happening with Planet Earth can't be ignored any longer. According to the "sources" we've worked with, this situation is critical for humanity.

Let me explain who our "sources" are because they are a strange but central part of this model. They are higher-dimensional beings, guides, angels, call them what you like—who can interact with us and even manipulate physical reality. The connection with higher beings—beings of love, light, or divine nature is a trend that's been observed among people involved in advanced technology. Some say they are from the future, other dimensions, or other planets. Whatever they are, these beings often impart information to those working with this technology. It sounds crazy, but the pattern is hard to ignore.

In our case, especially in the '80s and '90s, we had repeated experiences where information given by these beings proved to be 100% accurate. Our experimental data alone wasn't enough; we were interpreting it through conventional engineering and physics, which, according to them, was wrong. Their guidance corrected us over and over. That's why much of the information I share comes from them—it was validated through both experience and repeated proof.

They said this is the decade (2020-2030) of transformation and that they've been waiting for this period for a long time. The Earth is in the spotlight now, and the number of beings observing our planet is beyond comprehension. Even the "production crew" behind this play called Earth is bigger than the number of incarnated beings at this point. Along with many revelations, we've been given countless insights about the future—about how this transformation will change society, science, and life on Earth. That's the context for everything that follows in this book.

We're entering the dawn of a new civilization — a golden age. Hopefully that's something you're looking forward to.

And before I dive in — thank you to everyone, in public, private, and yes, undisclosed sectors, who have supported this work over the years. Your dedication matters, because this model of the universe may very well shape the future of humanity. We are moving into a time of radical transformation, a time that will allow this type of technology to flourish.

## Note from the Editor

I am glad that I have the essence of the teachings in the form of a book for an easy flip-through. But if you really want to connect with Kevin's teachings at a 'heart level,' please watch his videos. There's information on many more topics than I could possibly cover here. When you feel really drawn to this knowledge and want to revisit the key concepts better, let this book be your companion. Thank you.

- Apexa Shah

## Part 1: The Dark Era of Science

Planet Earth is in a rough situation right now, to say it lightly.

Over a hundred years ago, Nikola Tesla was working with etheric energy (the universal energy that flows through the cosmos) and etheric technology. But the corporate powers at the time — the ones considering funding him — couldn't see how they could make money off it, since 'ether' is essentially free. Of course, that was ridiculous, because they actually could have made plenty of money with it.

Either due to greed or ignorance, funds were diverted to research and infrastructure for electricity, purposely shutting down the research on etheric energy. For the last hundred years, electricity has been mass-distributed under planetary conditions that allowed it. But we take those conditions for granted. We don't realize how much our technology interacts with the energetic systems of the planet.

The Earth is a sensitive resonant system. Magnetic energies balance and rebalance constantly; however, conventional electric power plants pull electrons (what conventional science might call free electrons) directly from the ozone layer to complete their circuits. They drain the ozone faster than it can be replenished.

Photovoltaic solar panels do not significantly harm the ozone layer. However, large-scale solar thermal plants that power conventional generators cause ozone depletion just like coal or hydroelectric stations. Strong magnetic fields in these power plants connect to the larger system, and every generating station contributes to ozone depletion.

When forced technologies like electricity interfere, the balance collapses—producing hurricanes, earthquakes, and volcanoes as the planet pushes and pulls to stabilize the imbalanced attract structures.

Brace yourself for the shocking news that “our sources” revealed: **the worldwide use of electricity that is rampant now is the greatest destructive action of all.**

### Why the Ozone Layer Is Critical to Our Survival

The ozone layer consists of molecular structures containing polarized vortices—what scientists may one day recognize as “single vortices,” often mislabeled as free electrons. These structures are designed to bind with incoming solar energy and neutralize the harmful radiation, protecting life on Earth. They are also encoded to attract additional structures for ongoing replenishment.

The rate of extraction and destruction continues to drain the system. Naturally, as the ozone pool diminishes, the number of available attract structures also diminishes. Less ozone equates to less ozone formation—and we are nearing a tipping point.

The poles are points of magnetic excursion where compression is strongest and the field depth is weakest, making them vulnerable. But polar holes are a warning sign: they indicate global thinning. Small holes are already appearing elsewhere.

The ozone layer is thinner than it's been in millions of years, the magnetic field is weaker than in 26,000 years, and the ionosphere is fragile. Normally, solar storms and coronal mass ejections are managed by the ionosphere and ozone layer. But with the ozone pool already depleted, those events now have a much more dangerous effect.

If the ionosphere passes the critical threshold, oxygen could escape into space. At that point, radiation effects on surface life would be undeniable and devastating. Accelerated ozone depletion will ultimately lead to a global extinction event for surface life if it is not stopped. Our sources stress this is one of the top concerns for the survival of life on Earth.

### Options That Won't Solve the Ozone Problem

- Spraying chemicals: Adding chemicals to the ozone is highly ineffective. They are not properly coded to attract and form more ozone. Atmospheric systems are designed to maintain precise energetic ratios. Anything not in resonance with the system is filtered out automatically. Worse, they interfere with natural replenishment by altering the magnetic resonance signatures of the ozone field, which hinders restoration.
- Modifying the ozone layer to produce more ozone: This is not a realistic option either. The particle template pool is optimized for life here. Increasing the particle count or speeding replenishment would destabilize the system and cause harmful global consequences.

### Extinction Ratios and Tipping Points

This topic is about critical tipping point ratios, or what some people call extinction ratios. I am not sharing this to drum up fear or panic. This is simply information people deserve to know—because advanced monitoring technology is already tracking these conditions. These ratios are not abstract concepts—they are measurable realities. We are close to several tipping points that could lead to extinction-level events.

- Ozone Depletion to Replenishment Ratio: I'll start with the key point we already discussed: The ozone layer is being depleted by both human technology and solar events, in combination with the Earth's weakening magnetic field. At the tipping point, 90% of surface life could disappear in less than 20 years. We are only a few years away from this threshold.
- Natural to Unnatural Molecular Ratios: Every system in our universe is an open system with etheric magnetic energy flowing through it at all times. A pressurized flow of attraction sustains everything. When unnatural materials—plastics, manipulated radioactive elements, or certain chemicals—are introduced, they disrupt that natural etheric flow. The greater the imbalance,

the more upheaval occurs until the system wipes out everything unnatural. We are only a few years away from this ratio becoming catastrophic.

- Resonance to Dissonance Ratios in Technology: Almost every technology creates measurable fields. Dissonant technologies, like conventional electricity generation, disturb and destroy them. The dissonance created by conventional power plants has pushed our planet into direct conflict with the ionosphere.
- Distribution to Redistribution Ratios: In a balanced model, energy is distributed throughout our environment and then redistributed back into an interdimensional flow. Humans have interfered with this cycle through chemicals, pollution, GMOs, and more. These disruptions block redistribution, creating disease, mutation, and ultimately extinction.

### **The Insanity of GMOs**

Genetically Modified Organisms (GMOs) are one of the most dangerous and reckless creations of humanity. GMOs are far more destructive than most people realize. On the surface, the conventional risks are obvious—disease in humans and animals that consume them, environmental destruction, cross-contamination of crops, loss of biodiversity, corporate control over seeds, and the domination of food systems. Even from a purely conventional point of view, GMOs are dangerous and damaging.

But when examined through the etheric magnetic model of the universe, the implications are even more alarming. This model reveals the interconnectivity of all systems—humans, animals, plants, even so-called inanimate objects. Everything is linked through etheric magnetic resonance. GMOs disrupt this resonance. They are not just altered crops; they are a distortion of interdimensional balance.

At the quantum level, every living system carries interdimensional components, blinking in and out of existence, encoded to connect with other systems in harmony. A field of GMO crops resonates out of alignment with nature, and in doing so, contaminates the entire system. The altered resonance extends beyond the crops themselves: it flows into the animals and humans that consume them, into bees that pollinate them, into the honey they produce, and eventually into the resonance field of nature itself.

This disruption weakens the universal flow of energy through life. It suppresses natural abilities, blocks energy pathways, and interferes with humanity's evolution. GMOs don't just alter food—they alter consciousness. They create dissonance in the etheric resonance field of the entire planet.

The conclusion is simple: humanity must return to natural systems. Nature is already perfect. It cannot be improved by genetic manipulation. The deeper we interfere, the more destructive the results. We must restore natural agriculture and protect the resonance of life. The survival of our species depends on it.

At a personal level, avoid GMOs whenever possible. It is difficult, especially in countries where contamination is widespread, but it is essential to take a stand for your own health, your consciousness, and the resonance of the planet. This is not just about food—it is about survival, evolution, and the future of humanity.

## Part 2: Global Extremes (Not Just Global Warming)

Earth's etheric energy model doesn't support the idea of "global warming" but acknowledges "global extremes." Let's look at a couple of its manifestations.

### Solar Storms

Solar flares, coronal mass ejections, solar wind—even cosmic radiation affect the ionosphere. Any vortex process linking the ionosphere and Earth's inner grid can be intensified by added energy of solar storms. That means stronger hurricanes, more powerful earthquakes, and increased volcanic activity. Each incoming surge of radiation overcharges it further.

The solar cycle is now exacerbated. The peaks are sharper, the storms more severe, and the cycles less balanced. The reason we are having so many severe solar storms now (beyond the conventional explanation of being in a solar cycle peak), as per this model, is that humanity has contaminated the system—primarily through 2,000+ nuclear bomb tests. Those tests, along with electricity and other human activity, have added unrecognized energetic structures to the system. These create pressure build-up across the Earth-Sun vortex connection, which normally balances energy and resonance.

Solar storms are not just space weather—they are tied into Earth's energetic system, our DNA, natural disasters, and even the coming pole shift. They're part of a larger process of change and rectification that humanity is moving through.

From this model's perspective, storms will continue intensifying because the system hasn't been cleansed and contamination is ongoing. Solar pressure increases can intensify underwater volcanic activity and other processes, leading to record-breaking cold, heat, and storms. The real trend is solar extremes, not simple warming.

There are also interplanetary factors. From the magnetic energy perspective, cosmic rays are a key factor. We are entering a period of cosmic rays this planet hasn't seen in a very long time. These rays energize not only the ionosphere but also the Earth's interior, driving pressure buildup. Add to that solar radiation, CMEs, and solar wind, and the result is increasing stress on the planet.

### Magnetic Field Weakening

Earth's magnetic field shields life from solar radiation, stabilizes the atmosphere, and maintains resonance across ecosystems. The weakening of the field that's already underway is not a minor fluctuation—it is a profound planetary event. As it weakens, dramatic transformations will follow.

A weaker field allows more solar particles and cosmic rays to penetrate the atmosphere. This leads to an increase in radiation on the surface, causing genetic mutations, rising cancer rates, and disruptions to weather patterns. It also stresses the ozone layer, which is already compromised by electrical

generation. The combination of a weakening field and ongoing human dissonance accelerates the decline.

Scientists have documented that the field is declining in strength and shifting at an accelerating pace. With a weakened magnetic shield, even moderate solar events could shut down electrical infrastructure.

### Why Electricity Will Fail

Here's the problem: conventional power generation isn't isolated. Coal plants, nuclear plants, hydroelectric plants—they all tap into the ionosphere improperly, whether scientists realize it or not. As the ionosphere grows more charged, these systems will overload. Electrical grids may not fail globally, but localized failures are likely. Some areas could see temporary grid collapses during major storms.

Electricity at high voltage will fry conductors. Manufacturing that relies on high wattage will become nearly impossible unless done in shielded facilities. Faraday cages, grounded metal buildings—these will become essential for any electrical use. The higher the voltage, the more the ionosphere reacts, shorting systems out.

### Technology and Daily Life in a Supercharged Ionosphere

- Manufacturing: High-voltage manufacturing will collapse, but shielded, low-voltage processes can continue.
- Electronics: Low-voltage devices—computers, LEDs, solar panels with small outputs—will survive, since they don't draw heavy attention from the ionosphere. Fiber optics and coaxial cables will also remain useful.
- Communications: High-energy signals like Wi-Fi towers, radar, and radio will black out. Expect something like shortwave radio during a solar storm—times ten, and constant. Magnetic technology, however, will thrive in that environment.
- Satellites: Communicating with satellites electrically will be nearly impossible. Rockets will also struggle, as high-voltage components will fry when passing through the ionosphere unless shielded with magnetic technology.
- Resource Extraction: Oil drilling, mining, and other high-powered operations will become nearly impossible.
- Transportation: Combustion engines could be modified for low-voltage use, but oil and gas supply issues make that short-lived. Electric vehicles won't survive in the charged ionosphere. Magnetic energy engines will likely replace them. Boats may manage if properly grounded to water.
- Everyday Infrastructure: Schools, hospitals, grocery stores—if they operate at low voltage, they can keep functioning until magnetic energy takes over.

Practically, having backup solar panels and batteries not connected to the grid is wise. Anything tied to the grid or grounded could be fried during an extreme event. Disconnected backup systems are safer and can provide emergency power.

Our safety on Earth depends on many variables: season, Earth's tilt, timing of CME impacts, cloud cover, and distribution through the magnetosphere. Equatorial regions may face constant exposure, while hemispheric tilt can provide some variation. Theoretically, heavy shielding like lead structures could help, but for most people, practical protection isn't possible. Ultimately, personal guidance, meditation, and intuition may be the best way to choose safe locations.

### **Pole Shift**

Even conventional science admits that Earth's magnetic poles are moving. In this model, the Earth's magnetic energy flow is changing as new poles—or vortices—form in connection with the planet's toroidal field. Where those new poles establish themselves is still uncertain, though many predictions and prophecies exist.

Pole shifts unfold in stages, often beginning with erratic weather and seismic activity. Severe weather patterns, solar flares, and CMEs are intensifying. On top of this, energy is entering our solar system from outside it.

These phenomena are driven by etheric magnetic energy entering the planet. Pressure increases trigger volcanoes, earthquakes, storms, and atmospheric extremes. Lightning is another sign: bizarre new types, high-ionospheric "space lightning," and lightning linked to volcanic eruptions or earthquakes. These are magnetic discharges, evidence of the ionosphere's connection to Earth's interior energy rim. All of these signs point toward an approaching magnetic pole shift. While conventional scientists claim such events are thousands of years away, the acceleration of activity suggests otherwise.

Top-secret organizations track these patterns in detail. If released publicly, they could help meteorologists and scientists improve prediction of earthquakes, volcanic eruptions, and weather events.

Every pole in every cycle is slightly unique—different in resonance, intensity, spin, and energy flow. Currently, a new pole is emerging through the South Atlantic anomaly. When solar flares strike an already unstable ionosphere, they push and pull magnetically. That can accelerate the formation of the new vortices and strengthen them. If the new pole consolidates in the North Pacific region, it could destabilize tectonic plates, triggering earthquakes and volcanic eruptions.

Historical records show that pole reversals are cyclical. These reversals coincide with mass extinctions and planetary resets. We are approaching such a cycle now, and the consequences will be global.

Significant earthquakes may occur before the pole shift, but the most extreme Earth changes are expected afterward.

## Volcanoes

Volcanoes are becoming more active, earthquakes are increasing in frequency, and extreme weather patterns are destabilizing agriculture. These are not isolated incidents—they are interconnected signals of the larger shift.

Most volcanic events will be mild compared to catastrophic possibilities. The real danger lies in pole shifts triggering imbalances. But if we stay connected to guidance, prepare where possible, and keep perspective, this process can be navigated.

### Super Volcanoes

Super volcanoes are also part of this cycle. Depending on how you define them, there are perhaps a dozen recognized super volcanoes worldwide, along with many other potentially destructive volcanoes. Super volcanoes and many other volcanoes sit along Earth's magnetic corridors.

We were given this insight: The points of excursion exist along magnetic corridors, and these corridors must remain balanced.

According to the information we've received, there will indeed be activity among the world's super volcanoes leading up to the pole shift. Most will be relatively mild compared to what they're capable of. If eruptions occur in a balanced way across the globe, the energy release can be distributed without catastrophic imbalance. That's what we hope for.

But if new poles emerge too close to a super volcano, the interaction between pole shift energy and volcanic pressure could cause a massive eruption—far beyond a typical event. It could trigger something devastating, affecting regions hundreds or even thousands of miles away.

Their eruptions have historically coincided with pole shifts, as the redistribution of energy through Earth's core destabilizes crustal systems.

If you live near a super volcano, try to be at least 100 miles away. If you are downwind in terms of jet streams, try to be 200 miles away.

This is especially urgent for the U.S. West Coast. That region is a hot zone for potential volcanic, seismic, and tidal wave activity. Japan and other Ring of Fire locations share similar risks.

If you live on a small island, near sea level, or close to a coast, consider moving to higher elevation on a larger landmass. Volcanic eruptions—especially undersea ones—can trigger tsunamis, earthquakes, and widespread destruction.

Yes, this is difficult advice. Tens of millions of people live in high-risk areas. But intuition, meditation, and prayer should guide personal decisions.

## Part 3: Power Without Electricity

### Can We Shut Down the Electric Grids?

Unfortunately, we cannot simply shut down the electric grids—because that would trigger hundreds of nuclear plant meltdowns. Nuclear power is deeply dangerous until its radioactive materials are not neutralized and safely decommissioned.

The danger of nuclear power plants is a key factor in the orchestration of global events by higher beings. It is of critical importance that all nuclear material be completely neutralized with magnetic technology in the near future.

### How Can We Power the Planet Without Depleting Ozone?

To answer this, we must go back to the concept of the etheric energy. We've been living under a scientific model that has essentially written off the idea of etheric energy — even though it's in us, around us, and throughout the universe. Infinitely complex structures of etheric energy govern the universe. In fact, that's the glue that holds the universe together. It's a never-ending, renewable source of energy.

If you think stars are simply powered by their own fuel, think again. Etheric magnetic energy is the primary source of power for all stars. All systems are open, with etheric magnetic energy flowing through everything, inter-dimensionally.

The etheric field itself is primarily neutral. So consider this: there are no free electrons in the etheric field — but **there are free neutrons**. How about using neutrons and ions for power instead of electrons? Moreover, how about not forcing an extraction? Instead, we can create an attract stream, drawing from and returning to the ionosphere, which balances, rather than destabilizes, the system. This is the exact principle behind magnetic technology!

Tesla understood that the universe was made up of resonances: magnetic resonance and what he called electrical resonance. And I have no doubt that if he didn't already know it, he would have figured out quickly that etheric energy not only provides unlimited free energy, but also the ability to assemble unlimited matter.

Once you learn how to channel etheric energy through devices — or even through the human body and consciousness — and you learn to polarize that neutral energy, add resonances, change its pulse rate, slow it down, speed it up, you can assemble it into any molecular structure. To the average person, it looks like you're creating matter out of nothing. But really, you're just giving energy the right vibratory rate and magnetic signature. The templates already exist.

Remember that there is one energy pervading the entire universe. That single energy manifests in an infinite variety of ways. Etheric or magnetic energy is one of those manifestations. It is neutral, efficient, and does not drain the ozone layer.

To generate power, we must use resonant conductors that attract energy only when needed. Unlike forced hot electricity, this power works with natural resonance.

Technically, we can harness magnetic energy because it is:

- Transmittable through any medium without degradation
- Best conducted through ferromagnetic materials
- It is easily attracted through interdimensional membranes with the proper neutral magnetic pulsing fields

It's sustainable, unlike electricity. If we really want to be sustainable, we must transition to using neutrons and ions for power. And only then can humanity be deemed truly advanced, both in consciousness and technology.

Now, before you think this information is another marketing gimmick for other gadgets, let me make the following disclaimer.

### **Disclaimer**

I DO NOT sell magnetic energy units and please do not contact me for this purpose. I get that it's frustrating to hear about high-level technology and not be able to touch it, use it, or see it in operation. It's painful and frustrating, and I understand that completely.

But the last time we sold free energy kits, not only was our lab completely destroyed, but my close friend and business partner was murdered. Our original engine was confiscated by the government. What we went through was just a drop in the bucket compared to what other inventors and scientists have endured for the last hundred years. If the government had simply allowed that first engine to be developed and encouraged its growth, people wouldn't have been paying for gasoline. Vehicles wouldn't need it. People wouldn't have been paying for electricity. That engine alone could have supplied scalable power for all needs. And if the government had gone further into the technology, it would have meant the end of hunger, the end of scarcity, the end of poverty, and certainly the end of dirty water.

However, we've had serious threats, and we don't take this lightly. There's absolutely no way I will sell any units until I have 100% clear guidance to do so.

In this present situation, all I can do is share the revelations conveyed to us by our sources. The videos I post (and this book based on them) serve an additional purpose: they establish a legal precedent. That's very important in an industry that is just forming with advanced technology. It gives people the

ability to have open-source access to this information, so they can pursue it eventually. Yes, this technology is not permitted today, but we don't know what tomorrow will bring. Much of it is meant to be shared for the possible hope of the future.

One more warning - don't fall for those who want to make money off you by handing out promises of new tech. Magnetic energy would be made freely available as soon as it is allowed; stay away from scams. If all you can do is to prepare yourself for the coming transition, it would be enough. The videos and this book are solely for that purpose.

That said, let's dive into the technical aspects of Magnetic Energy.

## Part 4: Magnetic Energy

Here's just a quick sample of some of the revelations we've been given over the years by beings of very advanced technology and consciousness; compared to us, that is. I think it's useful to share short snippets — little statements that you can ponder. Sometimes just a line or two is enough to spark reflection. So, let's go through a few of them.

### Magnetic Energy Basics

- **Attraction-driven:** It almost always moves by attraction.
- **Velocity:** It is unlimited and moves at varying rates, up to nearly infinite velocity.
- **Neutral current:** It is neutral flowing magnetic current—the flow of ions through the conductive use of neutrons. Though primarily neutral, it carries subtle polarities that guide its direction.
- **Geometric patterns:** It coalesces into geometrical patterns, forming the building blocks of matter.
- **Versatility:** It manifests in particle, pulse, and wave functions, showing its adaptability.

### Molecular and Nuclear Insights

- Magnetic pulsing is the key to unlocking the *molecular lock*.
- It is an error in thinking that heat is required for fusion or fission reactions.
- It's also an error to assume all nuclear reactions must produce harmful radiation.
- Room-temperature, safe nuclear reactions are possible.
- Molecular structures do not actually contain mass. What we perceive as mass is an *illusion created through magnetic resonance attraction*.
- All physical characteristics of matter — strength, density, etc. — depend on the inflow and outflow of resonant energy.

### Formulation of Matter

- Matter can be formulated, reformulated, or de-formulated with magnetic energy.
- From our perspective, that looks like creation, destruction, and replication — but really it's the continual shaping of etheric energy.
- All elements can be attracted or repelled with the proper pulsing magnetic fields.

### Cosmic Principles

- All energy carries a nearly infinite level of encoding, providing ongoing organization and stability in the universe's cycles of creation and destruction.
- Even gravity is compressed magnetic energy. It is not a function of mass. It can also be counteracted with magnetic energy.
- Black holes are not "dead stars" — they are return energy systems.

## Light and Etheric Fields

- The speed of light is variable.
- Light pulses travel roughly four times faster than light waves.
- Stars produce the etheric expression of light pulses, which then convert to light waves when interacting with systems like the ionosphere.

Our sources said that Science must have the freedom to investigate the core structure of the electron. With the right equipment, it's possible to discover where every single electron is formed. And they warned: if the ionosphere thins past a certain point, oxygen will begin leaking into space, making Earth unable to sustain life.

The message was clear—free magnetic energy must be allowed, because we're close to a point of no return. The survival of humanity is at stake.

Hopefully, this gets your wheels turning and sparks curiosity about its deeper nature.

## What Magnetic Energy Can Do for Us

Cold electricity or magnetic current doesn't require heat, voltage, or destructive stripping. It flows in harmony with the etheric system of the universe. This is about why humanity should pursue developing **neutral magnetic energy technology**, as soon as possible.

## Versatile Uses of Magnetic Units

Magnetic energy units give us incredible versatility to:

- Adjust pulse rates to create new effects.
- Safely replicate or disassemble matter.
- Achieve low-temperature nuclear reactions.
- Power anti-gravity systems.
- Generate light and heat directly.
- Spontaneously regenerate biological systems.
- Tap into unlimited etheric energy without environmental damage.

## Benefits for Humanity

- Bring unlimited storage and speed to all phones, computers, and devices.
- Allow people to live at a high standard of living with no need to work for survival.
- Enable instant, modifiable creations—houses, vehicles, furniture, clothing.
- Give people the freedom to pursue passions and create from the heart.
- Make it possible to manufacture new products at home for free.

- Unlock new forms of art, music, and entertainment.
- Enhance paranormal abilities such as telekinesis, telepathy, teleportation—even flying.
- Provide endless knowledge and truth on virtually any topic, exposing lies by governments, corporations, religions, or scientists.
- Allow people to witness historical events with complete accuracy and recreate lost documents, including ancient or religious texts.
- Enable free global and space travel.
- Eliminate all sickness and disease from humankind.
- Allow people to choose their age and live as long as they desire.
- Power healing centers that provide drug-free, non-invasive treatments.
- Make possible temples that connect to other worlds and dimensions, supporting higher ascension.

### Benefits for Industry and Science

- Produce unlimited quantities of any element without mining.
- Drive high-speed, advanced manufacturing.
- End harmful electricity, RF, and EMF production.
- Structure new elements for construction, including space stations.
- Provide force fields for communities, buildings, vehicles, and individuals.
- Redesign scientific models to more accurately reflect the universe.
- Facilitate interdimensional access—to past, present, and future.
- Negate or enhance gravity.
- Create beyond-light-speed space travel.
- Open the door to joining the galactic community.

### Environmental Benefits

- Restore ecosystems to perfect balance. Once magnetic technology is implemented, it can help rebuild the ozone layer rapidly. That will likely become one of its first applications.
- Provide unlimited, clean, renewable energy.
- Deliver pollution-free transportation and manufacturing.
- Bring frictionless movement through air and water.
- Remove every form of pollution from Earth, leaving pristine rivers, oceans, atmosphere, and energy fields.
- Provide chemically free, nutrient-rich food, while eliminating GMOs.
- Enable self-sustaining, pollution-free communities, fully independent and sovereign if desired.

There you go—a small glimpse of what magnetic energy can do for humanity, industry, and the planet itself.

Moving forward, this technology—just the water side of it—could solve every drought problem on the planet. At first, no one's even talking about overthrowing the oil or coal industries here. They can continue what they're doing for the time being. People can keep paying for gas and utilities if that's the system we're stuck with. But at the very least, for something as essential as water, authorities could allow this technology to come out.

This water technology isn't a threat to oil or coal. It's about building a new industry that could create countless jobs. If governments want to keep playing the economics-and-taxes game, fine—we can do that. Every unit of this technology is a “gateway invention” that can spawn dozens more. Jobs for skilled, unskilled, manufacturing, service—whatever.

But let's remember: magnetic technology ultimately points to a future where people don't have to work just to survive. Power, goods, water—all can be freely available. That's where this is headed.

### **The Power of Neutral**

Over the years, we've been given various snippets and revelations about neutral energy. Here are some of the key ones:

#### **What Neutral Energy Really Is**

Neutral fields manifest in the **balance of forces** — the combining of charges, the equilibrium of inflowing and outflowing energies, and the blending of polarities within atomic and subatomic structures.

It is these **neutral components** that provide the interdimensional energy exchange and distribution that sustains everything. That's how central neutral energy is to the functioning of the universe.

#### **Neutral Fields and Technology**

- **Neutral torus fields** are created by harmonic ratios of inflow and outflow, and by rotational and counter-rotational velocities.
- This is key for engineering free-energy devices. When built correctly, a counter-rotating torus forms naturally around the device.
- That field has to remain in harmonic synchronization with the primary field, otherwise you don't tap into the etheric flow.
- As soon as inflow and outflow ratios diverge, polarities start forming and the connection to the etheric field weakens.

So: proper element combining = access to neutral energy.

Other examples:

- Capturing alternating polarities can open neutral energy.

- Water vortices tap neutral energy.
- Uniform torus fields (non-electric) tap neutral energy.
- Even ordinary magnets have neutral points between their poles, though in specialized magnets it's harder to measure.
- The center of a vortex often contains the strongest neutral field.

And very importantly: so-called **neutrons** are not destroyed — they are in continuous interdimensional exchange, moving between systems.

### Why Neutral Energy Matters

Neutral magnetic technology is the **key to sustainability**:

- Neutral magnetic formulation = unlimited resources.
- Neutral counterbalancing fields = gravity control (anti-gravity).
- Neutral shielding = space travel beyond light speed. The “light-speed barrier” is simply a myth when working with neutral fields.
- Neutral pulsing functions outside space and time, allowing for what we call “time travel.”

In short, neutral energy opens up entire frontiers of possibility.

### Neutral Energy and Consciousness

This may sound more “new age,” but it’s important.

- The **heart field** is predominantly neutral.
- The **etheric field** is predominantly neutral.
- The **Source field** itself is neutral.

When you connect through your heart field, you tap into the universal mind and the unlimited energy of the cosmos. What we experience in that state is what we call **love** — that overwhelming sense of connection and oneness.

Even our bodies are designed for this. The right and left sides — the hands, feet, and brain hemispheres — all carry the potential for harmonic energy flows that generate neutral fields. This creates the torus around the body and enables phenomena like interdimensional travel, teleportation, and out-of-body experiences.

### A Call to Science — and Humanity

It’s time for conventional science to stop **ignoring or demonizing neutral energy**. Safe, neutral magnetic technology is the future.

And beyond just technology:

- Neutral spirituality
- Neutral economics
- Neutral politics
- Neutral thinking and feeling

...all of these are part of our collective ascension process. They are essential if humanity is going to step out of the destructive cycles we're trapped in now and step into a sustainable, enlightened future.

## **Magnetic Energy and Electricity**

Electricity has been the backbone of industrial civilization for over a century, but it is fundamentally inefficient, unstable, and destructive. Megawatt grids are massive dissonance generators, pushing humanity further into imbalance with every passing year. They tether survival to scarcity, cost, and environmental destruction. The suffering caused by clinging to electricity has been enormous—wars over oil, pollution, nuclear disasters, and chronic disease linked to dissonant fields.

There's a reason why electricity has never been prevalent during the "up-cycles" of our solar system and planet. We move through lower vibration cycles and higher vibration cycles. Electricity isn't really a prevalent technology in the high vibration cycles.

The pole shift will be the turning point. When resonance is restored globally, dissonant systems will fail. Electrical grids will short out under new ionospheric conditions. High-voltage transmission will become impossible, as overloads and discharges destroy conductors. Efforts to shield or patch the system will not succeed, because the very foundation of forced electron flow is incompatible with the coming resonance.

Magnetic energy will take electricity's place. Unlike electricity, magnetic power is neutral and resonant. It draws energy only as needed, returns it to the system, and enhances rather than depletes. This is why higher beings have already seeded magnetic technology across the planet. The transition is orchestrated to prevent total collapse and to ensure survival during the shift.

The end of electricity will be painful for those who resist. Industries, corporations, and governments that built their power on electrical infrastructure will struggle to let go. But the collapse is inevitable. No amount of denial, secrecy, or resistance can stop universal resonance from overriding dissonance.

For humanity, the challenge is acceptance. We must embrace magnetic energy quickly, not only to survive but to thrive. The suffering of scarcity, pollution, and conflict is not necessary. The technology exists to end it. The only barrier is consciousness—the willingness to step beyond the familiar and into a higher paradigm of energy.

Electricity is primitive compared to magnetic energy. Electricity's end is not a tragedy. It is liberation. It is the breaking of chains that have bound humanity to limitation and destruction. The Age of Magnetic Energy will replace wires, grids, and scarcity with freedom, abundance, and resonance. The sooner we embrace this, the smoother the transition will be.

### Technical Comparisons Between Electricity and Magnetic Energy

From a technology standpoint, the magnetic energy units we've been working with use a **flow of ions through the conductive use of neutrons**. You could call it a low-level nuclear reaction—operating at room temperature.

I want to contrast that with **conventional electricity**—the kind produced in hydroelectric dams, coal-fired plants, or nuclear power plants.

### Using Copper in a Magnetic Energy Unit

Now imagine a molecular structure of copper. Think of it as an interconnected vortex:

- One side manifests as a negative field (like electrons).
- The other side manifests as a positive field (like protons).
- At the center sits a neutral point, with energy flowing in and out.

In an ideal system, this vortex **flows energy smoothly**. In a **magnetic energy unit**, we carefully respect these resonances, alternating the inflow and outflow at just the right balance—not too strong, not too weak.

When we hit that “just right” resonance, the copper’s templated structure becomes accessible to an **unlimited amount of etheric energy**. That’s because the vortex maintains a natural inflow and outflow.

### Using Copper in a Conventional Electrical Circuit

Now contrast that with what happens in a conventional generator. In conventional systems, very strong magnetic fields are forced through copper coils and the result is:

- Electrons—or in magnetic model terms, **vortices of energy**—are stripped away from the copper’s molecular structures.
- This creates a **pressure wave** of unbalanced energy moving through the conductor.
- Those stripped vortices are now incomplete, looking to “fill the gap” and return to etheric flow.

The consequences:

- Heat builds up in the wire. Too much, and it melts.
- Sparks and reactivity occur.
- A surrounding energy field is created that draws from the **environment**—pulling from the atmosphere, the ionosphere, the ozone layer, or even the ground—to replace what was stripped.

This is why conventional power generation is so destructive. It constantly pulls from the environment to compensate for what the strong magnetic fields have ripped away.

### Templated vs. Stripped Energy

Here's the key difference:

- A **templated molecular structure** (like in magnetic energy units) always maintains its integrity, drawing etheric energy naturally in a balanced in/out flow.
- A **stripped, incomplete structure** (like in conventional electricity) is forced to steal from its surroundings, destabilizing the broader system.

The contrast with conventional electricity couldn't be more dramatic. When we run our society on electrons—the incomplete, unbalanced form—we're shortchanging ourselves and damaging the environment. Magnetic energy is a sustainable, infinitely versatile model—one that could eliminate pollution, revolutionize technology, and literally take us to the stars.

### Can We Use Magnetic Devices to Produce Electricity?

Even in the magnetic age, there may be certain uses for electricity. The key question is: how do we do that without burning fossil fuels, without chemical reactions, and without stealing electrons from the environment?

This topic is about producing electricity with neutral magnetic devices. Of course, like many of the other topics, it has a futuristic theme. Ironically, all of this information also comes from the past. I want to describe briefly how electricity will be generated in the future — when and where it's still necessary.

### Electricity as a Byproduct

In this etheric magnetic model, we cannot extract electrons directly from the etheric field. That would be impossible. Instead, what we can do is replicate conductors of electricity at very high speeds. This becomes the key to having free electrons. Importantly, electricity in this model should always be the **byproduct** of neutral magnetic processes.

So, here's the basic idea:

- You have a magnetic device that essentially powers itself.

- Electrons are sourced by continuously replicating conductors, built from a never-ending supply of etherically-generated neutrons.
- These neutrons convert into the structural polarities that form the conductors, creating free electrons as needed.

## A Simple Circuit Design

Imagine a very basic circuit:

- A **helical coil wound clockwise**, extending along a conductor.
- At the other end, a **helical coil wound counterclockwise**, the opposite rotation.
- These coils are magnetically resonated with alternating pulsing magnetic fields, each spinning in opposite directions and pulsing **180° out of phase**.

This setup makes both coils — and the conductor between them — become “alive.” They pulse in and out of our dimension, making free electrons continuously available.

At the midpoint of the conductor, you place the **reaction point** (say, a light bulb). The attraction between the two opposing coils supplies on-demand electrons to that point.

## Differences from Conventional Electricity

This system operates very differently from the electricity we use today:

- **Cold electricity** – conductors don’t overheat.
- **On-demand supply** – electrons appear only when needed, rather than wires constantly carrying a hot current.
- **Minimal resistance** – the conductor becomes extremely efficient, so conventional resistors and capacitors need to be rethought.
- **Reciprocal attraction** – the flow isn’t just pushed one way; it’s a mutual pull between oscillating coils, creating sustainable electron reactions.

Essentially, the conductor is being **replicated over and over at high speed**, providing an endless source of electrons.

## Future Enhancements

As we move further into the crystal age, conductors won’t just be copper, silver, or gold. They’ll be embedded with crystals. These crystals will resonate continuously at the proper frequency of the conductor, providing free electrons directly.

Until then, circuits like the one described above can do the same thing — giving us free, renewable, never-ending electricity, safely and cleanly.

This is a lot to take in, but it’s a critical step for the future. In fact, it could start as soon as tomorrow, because it’s far more effective and harmless than the conventional way we produce electricity today.

## Part 5: Mandatory Ascension for Earth

### What Put Us on the Galactic Map

When humanity detonated its first nuclear test, that contamination entered an interdimensional magnetic energy stream connecting countless solar systems. Our planet was placed on the “galactic map.”

Now imagine you’re part of a Galactic Federation — not Star Trek, but some sort of real Galactic Council. You’re looking at this planet — our planet — that’s going through a low cycle. Low consciousness, low awareness, low vibration. That’s normal. These cycles happen.

But this one has gotten out of control. Humanity now has nuclear technology, and they’ve put themselves on a path toward extinction — where all surface life has a very real probability of disappearing in the not-so-distant future.

So, let me break this down as simply as possible. Humanity has two choices:

- Either let 99% of the human population die.
- Or take the necessary steps to implement the age of magnetic energy.

It’s an oversimplification, but you get the idea.

And to make matters worse, there’s been contamination through magnetic streams that has spread beyond Earth — out into other solar systems. So, you can’t just ignore it.

### Various Scenarios

Let’s consider these various scenarios:

1. **Technology without rising consciousness:** If advanced magnetic technology emerged but human consciousness stayed low, the outcome would be disastrous. The elite would fight to hoard and weaponize it, while the masses struggled to break free. This would mean endless conflict — and it simply won’t be allowed.
2. **Rising consciousness without technology:** If consciousness rises but technology lags, humanity may step back temporarily into simpler living. But with higher awareness comes the ability to channel etheric energy directly, to build structures that focus magnetic flow — like the pyramids once did. Some form of the technology naturally reappears.
3. **Rapid ascension:** If you force a rapid ascension — a sudden leap in consciousness — you risk disaster. That kind of quantum-level change could rupture cells at the subatomic level. Life is too sensitive for that. So, whatever is done has to be gradual.
4. **Switch off the electric grid:** The Higher Beings (Galactic council) will not simply switch off the grid because of the nuclear risk, but magnetic technology has already been seeded among

governments to aid the transition. Governments and secret facilities must begin integrating magnetic technology into nuclear plants. Neutral pulsing magnetic fields can contain and neutralize radioactive material if grids go down. Whether by proactive human action or outside intervention, this will happen—it must. But it's far better for humanity to step up and prepare.

5. **Phased out ascension- advanced technology:** The best scenario — and the one we are heading toward — is **advanced technology combined with rising consciousness**. Humanity would be pushed into an Ascension process—forced to phase out dangerous technologies like nuclear and electrical power, and move into safer, higher technologies that require greater consciousness to operate. That is the true breakthrough: ending scarcity, cleaning up planetary damage, and uplifting everyone's standard of living. Direct, visible intervention from higher beings will only happen in an absolute emergency to prevent extinction. Until then, the responsibility is on humanity to transition.

### **Why We Are Being Helped**

It may seem surprising that higher beings and civilizations are so invested in our survival and transformation, but the reasons are profound and interconnected with the larger universal order.

First, humanity is part of a universal family. We are not isolated, even though it has often seemed that way. Other civilizations have gone through their own cycles of Ascension, and many now assist younger races as they move through the same process. Helping us is part of the natural flow of universal cooperation.

Second, Earth holds a unique place in the cosmos. It is a living library of genetic, cultural, and spiritual diversity. The survival of Earth's life systems has implications far beyond our planet. Other beings recognize this and are committed to preserving the richness of this world.

Third, the collapse of Earth's systems could create dissonance across the galaxy. Because everything is interconnected through resonance, a failure here would ripple outward. Helping humanity ascend is not only an act of compassion but also of necessity. It maintains harmony within the larger universal field.

Higher beings also assist because love is the guiding principle of advanced civilizations. They do not see us as lesser or unworthy but as family still finding its way. They offer help not to control, but to support our growth and ensure survival during this difficult transition.

At the same time, intervention is limited. Free will is sacred. Humanity must choose to align with resonance. Higher beings will not impose Ascension upon us, but they will orchestrate conditions that make survival possible and awakening more accessible.

Seeding of technologies is one form of this help. Magnetic energy systems, healing methods, and resonance-based tools have already been introduced quietly. Governments may suppress them, but they exist and will resurface when the time is right. This ensures that when the old systems collapse, alternatives are ready.

We are also being helped on a personal level. Guidance flows through dreams, synchronicities, intuition, and direct contact. Many people already sense the presence of guides, even if they cannot explain it. This help will intensify as the transition accelerates.

The reason we are being helped is simple: love. In the universal order, no race is left behind. Humanity is being lifted into resonance because it is our time. The assistance we receive is not charity—it is the fulfillment of universal law. We are meant to ascend, and we are not alone in the journey.

### **Signs of Assistance**

Look at the recent solar activity. We often hear predictions of incoming CMEs—then suddenly, they miss Earth. Some are deflected or dissipated. This suggests that assistance is already at work, “trial runs” being performed before more significant events occur. Behind the scenes and beyond our skies, there is far more involvement than we realize.

Higher beings are guiding this process to ensure as many people as possible come through it, even as surface conditions become challenging. What looks like chaos is actually transformation.

### **Earth Has Crossed the Point of No Return**

At the etheric level, the new pole is already here. The new toroidal field around Earth is already established. The old poles have already faded.

In higher dimensions, the “new Earth” is glowing, vibrant, and stronger. The magnetosphere is bolstered, the ionosphere healthier, and the poles more powerful. For us, the process is still unfolding—but it’s guided by that higher-dimensional template.

This means we’ve already passed the point of no return. The new structure exists; it’s simply a matter of alignment with what’s already present at a higher resonance. Because contamination isn’t limited to Earth, the entire solar system must shift. That means the incoming energy streams themselves must be adjusted. This change will begin at the quantum — or subatomic — level. As per Earth’s timeline, the process is set to begin in the **very near future**.

Before I discuss the process further, let me clarify the concepts of Ascension and Enlightenment.

## What Is Ascension? What Is Enlightenment?

Ascension and Enlightenment - these terms are often used interchangeably, but they carry distinct meanings in the context of the planetary shift. Both are essential to understanding the transformation that is now unfolding.

Ascension is the universal process of rising into a higher frequency of existence. It is not about leaving Earth behind, but about shifting resonance. When Ascension occurs, life reorganizes itself at a new vibratory level. The structures of society, the patterns of consciousness, and the very definition of reality change. Ascension is mandatory—it happens as a part of the cosmic cycle. No individual, nation, or species can stop it.

Enlightenment, on the other hand, is an individual process. It is the awakening to one's true nature. It happens when a person recognizes themselves as more than a physical body, more than thoughts, emotions, or social identity. Enlightenment is the realization of consciousness as eternal, interdimensional, and one with all things. It can occur at any time, even outside of Ascension cycles.

The two processes intersect. Ascension creates the conditions for mass Enlightenment, because the rising frequency of Earth supports expanded awareness. At the same time, individual Enlightenment supports Ascension, because every awakened being contributes resonance to the planetary field. This is why so many spiritual traditions have pointed to this time as pivotal. It is the meeting point of personal awakening and planetary transformation.

During Ascension, humanity will redefine its understanding of life. Survival will no longer be the primary focus. Instead, consciousness will expand to embrace interdimensional existence. People will communicate beyond words, feel energy directly, and live in a state of flow rather than resistance. Enlightenment will spread naturally, because the vibratory environment will make it easier to awaken.

This does not mean the process is effortless. Letting go of old attachments—fear, control, material obsession—is essential. The more one clings to the old paradigm, the harder the transition will feel. But for those who release resistance, the shift will feel like liberation.

Higher beings are assisting this process. Guidance is always available for those who tune into it. Meditation, heart-centered living, and openness to resonance allow individuals to connect with that guidance. Enlightenment is not achieved by force, but by allowing. It is a natural state revealed when resistance falls away.

Ascension is the collective rising of humanity. Enlightenment is the individual realization of truth. Together, they form the foundation of the new cycle. As we move deeper into the Age of Magnetic

Energy, both will accelerate. This is the dawn of a consciousness revolution, one that reshapes not only Earth, but humanity's place in the universe.

## **Suffering**

According to the information we've been given, the energy behind our physical universe originates outside space and time—at a much higher dimension or different realm. That energy distributes into galaxies, solar systems, and planets.

At its origin, the energy is neutral. As it flows into each system, it takes on polarization or encoding, which shapes the experience of that system. Every system is different. Our particular planet converts that energy in a way that's highly polarized—roughly 75% polarized compared to more neutral systems elsewhere.

From the universal perspective, energy always returns to Source as a net neutral. But within each system, the degree of polarization determines how experiences manifest. On our planet, the high degree of polarization means we experience extremes: love, joy, bliss—but also hatred, fear, pain, and suffering.

It's difficult to understand how the universal mind allows today's suffering, ignorance, and pain. From our limited view, what is allowed to happen on this planet can feel despicable. We are currently in a low vibration cycle, though transitioning toward a high vibration one. In the low cycle, suffering is pronounced—anger, hatred, fear, destruction. Humanity has lived in a low-vibration environment for thousands of years. Wars, famine, suffering — none of us have escaped the weight of it. All the strong energies resulting from war, environmental destruction, ancestral pain, and even the unresolved suffering of individuals get stored in the energy body of the planet. These emotions create blockages in the system, storing up energy that doesn't flow smoothly back to Source.

Even though our system processes the universal energy in a polarized way, across billions of solar systems, balancing energies are constantly at work. In the larger cosmic balance, even suffering has meaning.

In the magnetic energy model, we are intimately connected to the universe. Each of us has a thought energy field. Within it, we can generate virtually any thought, any polarity, any influence.

Our thought field can affect the chakra energy centers throughout our body—enhancing their flow, clearing them, even creating outward effects through them.

The issue we see on this planet, as in many lower-consciousness systems, is that people tend to polarize their thought fields. Emotions like hate, anger, and fear dominate. And because we are all intimately connected—instantly, beyond space and time—that polarization spreads through mass consciousness.

The global field, as a self-balancing system, then pushes back. It counterbalances polarization with more polarization. And the result? Endless cycles of conflict—religious, racial, political, social—conflicts that at this level of consciousness are nearly impossible to resolve.

However, suffering isn't meaningless—it's not wasted energy. Suffering adds to the encoding of this planetary system, fueling its cycles. It contributes to the larger flow, feeding the cycles that keep this type of planetary experience alive. We came here for this experience, to learn from the extremes.

This doesn't justify hatred or violence, but even the most painful experiences contribute to the system. In that sense, pain, joy, and every polarized experience we live through all serve the greater whole.

From that broader perspective, the system is extraordinarily well managed. Even dark beings—those we might label “evil”—are still tied to the universal mind. They have event lines too. When they step outside of them, higher beings correct their course.

That's why Earth attracts so many souls. Here you can experience the full range of polarization—unlike more neutral systems, which may feel like living in constant utopia but lack the extremes we find here.

And now, as the cycles shift, we're approaching a transition where pain, suffering, fear, much of that pent-up energy will be cleared and healed—by us, by the planet, and by other beings. It will be replaced by balance, awareness, and a deeper sense of unity. As the flow rebalances, it will restore the net neutral exchange with Source.

### **Disasters on the Planet**

A lot of disasters are tied to the pole shift. However, a pole shift is not an ending but a global reset, locking in the new energy and ensuring harmony for the next cycle.

At first glance, disaster and Ascension appear contradictory. But they are deeply connected. From the perspective of current consciousness, disasters seem destructive. But from the perspective of Ascension, they are mechanisms of transformation.

Humanity is moving out of a low cycle and into a high one. The balance being restored to Earth involves upheaval—and that upheaval is part of the process.

Disasters are not punishments, but catalysts that strip away attachments and open the door to a higher way of being. Disasters bring people together. The resonance of human intention grows exponentially when shared. Soon, millions will gather in meditation, chanting, and spiritual practice. The collective energy of such gatherings will alter not only consciousness but the very environment itself.

Ascension is not optional. It is a universal balancing process.

## Part 6: How the Ascension Program Will Unfold

### The Ascension Program

The beings guiding this transition may not use the same terminology we do. Much of what we've received has been translated into words that resonate with us, but the essence remains unchanged:

"As we modulate the incoming energies, the solar system itself will undergo transformation, beginning at the subatomic level. The flow-through of energy will increase. Natural structures will strengthen, while unnatural structures will break down.

Your connection to physical reality will actually deepen as your perception of higher dimensions increases. Your interconnectivity with nature will merge with your conscious mind. Your body will transform as you enter a new reality. The mind–body interface will be fully realized, and you will no longer be bound by the old physical limitations.

This is a complete redefinition of our relationship with matter, gravity, time, and space. You will be able to alter your magnetic resonance at will. Your power will expand exponentially, guided by heart intelligence and supported by family from higher realms — both human incarnations and interdimensional beings."

There is a wave of change coming to this planet unlike anything humanity has ever experienced. This wave will dismantle every institution — so they can be rebuilt from higher consciousness. The transition into a higher cycle is not only about what is gained—it is also about what must fall away. Anything that is rooted in dissonance, scarcity, or control cannot continue in the Age of Resonance.

These transformations may seem radical, but they are the **natural outcome of resonance**. When dissonance ends, harmony takes its place. The society that emerges after Ascension will be unrecognizable compared to the present one, not because it is forced, but because it flows naturally from living in alignment with universal energy.

The shift into resonance **will not only change individuals but also every structure of collective life**. Work, ownership, governance, health, and even communication will be redefined. The acceleration of nuclear subatomic energy flow is about to change existence as we know it. Doors that have been shut for thousands of years will open. Human abilities will be greatly enhanced. Awareness of life's interconnectivity will skyrocket. Cooperative action will guide humanity into a golden age of civilization.

Every human being is connected to a universal network where choices are made at the higher-self level, in communion with the universal mind. Those choices are not limited by scarcity; they are backed by forces with unlimited resources. And the old, futile efforts of governments, corporations, and power brokers to suppress progress will not be tolerated much longer. Oppressive systems built on lies will

crumble. Power structures, governments, corporations, and elites that thrive on secrecy and manipulation will lose their foundation. **Ego-driven agendas will lose their grip.**

The Age of Resonance cannot coexist with oppression. Transparency will replace secrecy, and resonance will dissolve control. Independent, sovereign communities will rise, no longer controlled by centralized elites.

What will not survive Ascension are the very systems that kept humanity bound in limitation. They will collapse not as punishment, but because they are incompatible with the higher cycle. What remains will be life in harmony—abundant, free, and aligned with universal love.

This transformation is not dependent on humanity's willingness or readiness. It is **happening regardless**. But it does serve us to consciously embrace these incoming energies, for that choice eases the transition.

### **Oneness**

The etheric flow between people will intensify. We will instantly feel the impact of our actions on others, reducing violence and conflict. Communities will form stronger bonds and become powerful agents of change.

As consciousness expands—whether after death or during the coming transition—we begin to directly experience oneness. When we pass away, we relive the pain or joy we caused others, exactly as they experienced it. This is because, at that level, we are fully connected.

In the higher cycle, this awareness becomes present in life, not just after death. Inflicting harm on another will immediately be felt by the one doing the harm, as well as those connected to them. That awareness curbs destructive behavior.

Tens of millions of people will awaken to this oneness. When they tune in to suffering—war, abuse, violence—they will feel it directly in their bodies. Compelled to act, they'll use meditation, prayer, and focused intention to stop it.

That collective energy is potent. When millions focus together, it changes reality. This is one way peace on Earth will emerge: through the awakened awareness and united action of millions who will no longer tolerate suffering.

And as the vibratory rate of the planet rises, this drive to live from the heart will only get stronger. People will feel compelled to connect, to create, to contribute — not for money, but out of resonance.

### **Global Revolution**

The future is **not about control**, ownership, or competition. It is about freedom, unity, and love. Society will not just survive Ascension—it will flourish in ways beyond imagination.

This process begins at the quantum level, spreads through every institution, and culminates in a **global revolution**. Out of it will emerge restored ecosystems, heart-centered technology, and a cooperative civilization entering its **golden age**.

The etheric model of the universe, and the technology that flows from it, is destined to shape humanity's future. Institutions of every kind — political, economic, religious, scientific — will transform. Magnetic energy, with its neutral base and infinite polarities, will revolutionize every field. It's renewable, safe, sustainable, and it ends scarcity.

Knowledge itself will evolve. Long-suppressed discoveries will resurface, alongside a deeper understanding of the cosmos. We will grasp the life cycles of stars, the mysteries of black holes, and the role of consciousness in shaping reality. Dogma masquerading as knowledge will fade, replaced by genuine exploration and discovery.

That world is closer than you think. The revolution has already begun. Subtle at first, undeniable soon. Intense, yes — but profoundly positive. The Global Revolution is coming! And with this revolution, we will finally realize just how beneficial magnetic technology is — not only to humans, but to the planet, plants, and animals.

The sequence is simple: tech assisted ascension → pole shift → ascension → magnetic technology. But within those stages are countless steps. But that's what's coming: a dynamic, transformative shift in the foundation of our existence. And once it unfolds, there's no going back.

### Genetic Revolution

There are scientists in top-secret labs experimenting with biology in pulsing magnetic fields and documenting genetic changes. But what I'm sharing goes far beyond that.

The rising vibration of Earth will cascade into our physical bodies, activating dormant DNA, deactivating unhelpful DNA, and raising the vibratory state of life itself. DNA is one of the most profound examples of an **interdimensional system**. It seamlessly combines biology with etheric magnetic processes, maintaining a continuous exchange of energy through its double-helix design. This creates counter-rotating subatomic vortices — an advanced design with unlimited encoding.

In this model, there is no such thing as "junk DNA." Every strand has purpose, even if only partly activated, with higher-dimensional templates containing uncorrupted information. And it is from those templates that transformation will begin.

This genetic revolution is not separate from technology or ascension — it is all interconnected. The awakening of DNA, the rise of consciousness, and the emergence of magnetic technology will converge to usher in a golden age of civilization.

According to sources, an orchestrated **ascension process** is scheduled to begin in this decade. At that time, new resonance frequencies will activate genes across the board — not just in humans, but in all species on the planet.

Our ion gates will be enhanced with supercharged ions, improving every physiological process. This ties directly to a supercharging of the ionosphere, which will resonate with our DNA.

Increased etheric flow through DNA will heighten internal pressure, flushing out toxins and dissolving energy blockages on both physical and energetic levels.

Our new genetic configuration will connect us with higher intelligences and interdimensional beings, who will guide us in creating technology to cleanse the planet and build true sustainability.

### **Scientific Revolution**

As with all great passages of time, we will witness unprecedented phenomena that defy the so-called laws of physics. Scientists may one day declare that “the laws of physics have changed, enabling new technology.” But that is not the truth. Neutral magnetic energy has always been aligned with universal forces — we are only now stepping into alignment with it.

False science will not survive. Theories that ignore resonance, consciousness, and interdimensional reality will be swept away. Scientific revelations will overturn long-held assumptions about matter, energy, and life itself. Science will expand into truth, incorporating magnetic energy and universal principles.

This could reshape the future of conventional scientific theories and concepts. So, let’s look at a few examples. Brace yourselves.

### **What Will Change**

- **Goodbye Big Bang, Hello Forever Universe.**

With magnetic technology, we’ll be able to measure etheric flow beyond space and time, revealing the ageless nature of the universe. Instead of a “bang” beginning, we see an ongoing interdimensional energy flow manifesting physical reality.

- **Goodbye Entropy, Hello Organized Universe.**

Thermodynamics, as we know it, will collapse. All systems are open, and molecular structures contain sub-atomic encoding that resists chaos. The universe is inherently organized.

- **Goodbye Empty Space, Hello Etheric Flow.**

Space isn’t a void. It’s saturated with etheric magnetic energy — usable, infinite, and free.

- **Goodbye Speed of Light Limits, Hello Infinite Velocity.**

Ships using neutral magnetic travel will move at near-infinite speed, far beyond light.

- **Goodbye Time, Hello Event Sequencing.**  
Technology will show that reality is structured by pulses, not linear time. With magnetic sequencing, we'll move forward or backward through events.
- **Goodbye Gravity-as-Mass, Hello Magnetic Pulse Fields.**  
Gravity is not caused by mass. It's neutral magnetic pulsing in circuits. With the right technology, it can be alleviated, enhanced, or redirected.
- **Goodbye  $E = mc^2$ , Hello Everything is Energy.**  
Technology will prove energy is simply etheric magnetic flow through subatomic and galactic structures. It can be measured directly, accurately, and without the old Einsteinian assumptions.
- **Goodbye Dark Matter & Dark Energy, Hello Magnetic Pulsing.**  
No need for invisible placeholders. Planetary and galactic motions are explained through etheric pulsing fields.
- **Goodbye Strong & Weak Forces, Hello Molecular Pulse Matching.**  
Subatomic structures form, reform, and disassemble through pulse harmonics and interdimensional vortices.
- **Goodbye Star "Fuel Tanks," Hello Interdimensional Flow.**  
Stars aren't burning finite fuel. They harness interdimensional etheric energy flows. Black holes? Not dead stars, but return energy systems.
- **Goodbye Blind Evolution, Hello Intelligent Design.**  
Interdimensional DNA analysis will show patterns of intelligent design, with multiple modifications across billions of years.
- **Goodbye Math as the Foundation, Hello Consciousness.**  
Math won't vanish, but it won't be the root of science. Consciousness and magnetic technology together will guide science in directions far beyond what equations alone can capture.

So, there you have it — just a sampling of how **neutral magnetic technology** will revolutionize science. It's the end of outdated models, and the beginning of a brighter, freer future — one where humanity embraces its true potential, and redefines its place in the universe.

## The Future of Science

Imagine an ascended world where...

- Scientists no longer compete for scraps of funding just to explore new fields of study.
- research isn't manipulated for corporate or government agendas.
- experimental results aren't twisted into political tools.
- projects aren't canceled simply because they threaten conventionally accepted theories.

- discoveries aren't stolen or buried because they endanger mainstream science and industry.
- "national security" isn't used as an excuse to suppress progress and chain humanity to outdated, toxic technologies.

Imagine a world where:

- Scientists are not imprisoned or silenced for breakthroughs that could free people from economic slavery.
- patents and research are not seized and destroyed by unaccountable agencies.
- anomalous data points are pursued, not ignored.
- disproving old theories is celebrated, not ridiculed.
- collaboration crosses all borders, all sectors, all disciplines.
- discoveries are woven into industry and education in real time.
- higher consciousness and heart-centered research become the norm.
- new ideas from *anyone, anywhere* are honored, recognized, and used for the betterment of all humanity.

### **What's Coming**

And then... scientists will finally be free. Free to serve humanity. Free to explore the universe. Free to operate from an enlightened state of consciousness.

On the technological front, the breakthroughs will be unlike anything recorded in history. Propulsion systems will no longer require fuel. Technologies will transform the planet. Petroleum, coal, and dirty nuclear power will be phased out, replaced by clean magnetic, ionic, and neutron-based technologies.

As that awareness takes root, science itself will change. Technology will be understood not only in physical terms but also in terms of its interdimensional effects .

Make no mistake: the Scientific Revolution is coming.

It cannot be stopped.

It will not be delayed.

So — get ready.

## Part 7: Magnetic Energy to Mitigate Earth's Problems

As the planetary cycle shifts, first to collapse will be dissonant technologies. Electricity-based grids, nuclear plants, GMOs, and other destructive systems will not function in the higher resonance of the planet. They are fundamentally incompatible with the new cycle. As Earth shifts, these systems will fail, regardless of human efforts to preserve them.

Electricity from a nuclear power plant carries evidence of radioactivity in its core structures—something you won't find with coal or hydroelectric power. That difference will be proven in the future.

GMOs are one of the greatest obstacles to the Ascension process. They deliberately throw off resonance, making it harder for humanity to rise in frequency and awareness. This is not accidental. Forces that wish to keep humanity trapped in low-level consciousness promote GMOs as part of their agenda. But they cannot stop what is coming. Ascension is mandatory, and anything that blocks resonance—including GMOs—must end.

### Wars

This topic examines the connection between magnetic energy and wars.

War, in its modern form, is fueled by dissonant technologies—particularly electricity-driven systems. From weapons manufacturing to communications, surveillance, and transportation, conventional war relies on electricity. This dependency ties conflict to a destructive and unsustainable energy model.

Magnetic energy changes everything. Unlike electricity, it does not generate dissonance. It aligns with resonance, neutralizing the destructive vibrations that fuel conflict. Weapons built on dissonant systems will fail in a magnetic environment. Entire infrastructures of war, dependent on megawatt grids and electronic fields, will collapse as resonance takes hold.

This is not just about technology; it is about consciousness. War thrives in scarcity and fear. Magnetic energy dissolves scarcity by providing limitless clean power. When abundance replaces limitation, the motives for war lose their grip. Resource battles, energy wars, and economic control through fuel all become obsolete. Magnetic energy undercuts the very foundation of conflict.

Military structures will not survive Ascension. Without scarcity, conflict loses its fuel. Weapons dependent on electricity will collapse, and the consciousness that drives war will fade. Instead of armies, humanity will build systems of cooperation and shared defense rooted in resonance. True

security will come from unity, not division. And as that grows, the conflicts and divisions that have dominated our world begin to dissolve.

Prophecy and vision have long warned of great wars before peace arrives. This aligns with the current cycle. Disasters and conflicts will escalate as old systems resist collapse. But once magnetic energy becomes widespread, war will no longer function. Dissonant technologies will cease to operate, and the consciousness that created them will fade. In that sense, magnetic energy is not only a new power source—it is a peacemaker.

The implications are profound. Armies and governments that cling to old technologies will find themselves powerless. Nations that embrace resonance will thrive. The global balance of power will shift, not through conquest, but through alignment with universal laws of energy. War, as we know it, cannot survive the Age of Magnetic Energy.

In survival terms, this is crucial. As magnetic resonance spreads, humans will no longer live under constant threat of conflict. The suffering created by endless battles will be replaced with cooperation, abundance, and unity. The military-industrial complex, one of the greatest engines of destruction, will dissolve. In its place will rise a society where energy supports life rather than destroys it.

The end of electricity is also the end of war. Magnetic energy is not only humanity's path to survival—it is humanity's path to peace.

## **Water**

As per the Einsteinian model, water is a simple, isolated substance we can use or abuse. As per the Magnetic Energy model, water is one of the most powerful elemental tools on our planet, and a direct means of enhancing our ascension. Because it is intimately connected to all life — and changing the resonance of any water changes the resonance of all water, including the water within us.

The closed-system chemical ignorance of  $H_2O$  would have you believe that water is only about physical survival. But those who are aware of the interdimensional energy exchange know that water's magnetically receptive qualities allow it to encode, attract, repel, enhance, and harness its true power.

We already have Magnetic Unit designs like the water purifier—scalable units that clean groundwater, lakes, rivers, and even desalinate ocean water. Say goodbye to “dead zones” in rivers, lakes, and oceans. The absurdity of using Earth's water supplies as dumping grounds for chemicals, plastics, and waste and then treating it again with chemicals for consumption will stop. The current inefficient practices of desalination that release harmful byproducts into the ocean will also come to an end.

Instead, pulsing magnetic fields encoded with elemental signatures will attract and remove every form of pollution from groundwater, rivers, lakes, and oceans — ensuring total planetary cleansing. The rotating and counter-rotating pulsing magnetic fields will completely purify water and bring it to its

ideal state for consumption. They will drive efficient desalination and even remove radioactive contamination. The magnetically revitalized bodies of water will be mineralized and oxygenated to restore balance and let ecosystems thrive.

Droughts have been around forever—across continents, across history. But in the United States right now, especially in the Southwest, they’re particularly intense. And of course, this applies globally. This isn’t some first world versus third world issue. This technology is for everyone. Clean water is a necessity for all people, everywhere.

There’s no need for droughts. No need for scarcity of clean water. With magnetic energy technology, we could change the game for everyone on Earth—plants, animals, and people.

We can solve global water shortages with harmonic magnetic signals that penetrate deep into the Earth and attract abiotic sub-plate water supplies, anywhere on the planet, using off-grid magnetic devices.

We also won’t need aqueducts, conduits, and piping that strip water of its beneficial magnetic and energetic qualities. Because there would be water transport systems that mimic natural spirals, enhanced with neutral magnetic fields to keep water fully charged during transport.

Magnetic technology can also be combined with orgone-type devices to bring rain where it’s needed. Fires burning out of control? You can make it rain until they’re extinguished. Drought in a region? You can replenish reservoirs. This isn’t electricity-based geoengineering—this is natural, resonant technology that works in harmony with the planet.

## **Pollution**

When magnetic technology is developed and scaled, it opens the door to some incredible possibilities. Imagine vehicles like airplanes that never have to land, powered by anti-gravity principles, carrying entire systems to clean the air.

But before we even get that advanced, the basics are straightforward. Certain magnetic energy units, when running, connect the Earth’s interior to the upper atmosphere. They create large fields—sometimes ten miles wide—counter-rotating toroidal energy streams that draw particles into a neutral center point.

At that neutral point, the Earth is fed with etheric energy:

- strengthening the ozone layer,
- replenishing atmospheric balance, and
- transmuting particles that don’t belong.

The key here is ratios. The ideal elemental balance in the air changes constantly—by season, location, elevation, and temperature. Simply trying to “remove carbon dioxide” is shortsighted. You’d just create another imbalance. The better approach is to give the Earth tools to restore its own balance. That’s exactly what magnetic energy technology does—it empowers natural processes to realign.

For problems like the garbage islands floating in the Pacific, or landfills piling up with plastics, another principle comes in: unlocking the molecular lock.

Neutral pulsing magnetic fields at precise frequencies can literally break down molecular structures. Set up towers around a landfill, pulse the whole site, and you could reduce mountains of garbage to harmless dust. The same method could apply to garbage islands at sea—surround them with the right fields, target the inorganic material, and transmute it into something benign.

Another option: magnetic buoys in the ocean. These would run indefinitely, attracting garbage like magnets. Once collected, the debris could either be broken down into neutral matter or transformed into something safe.

Humanity will focus on restoring balance, treating Earth as a sacred sanctuary, and living in harmony with its consciousness. Because when we do, Earth won’t just be healed—it will become a valuable contributor to the greater energetic streams of the universe. That’s why this technology matters. It’s not just about cleaner air, water, and soil here—it’s about our role in the galactic community. We need to rise in consciousness, release suppressed technologies, and use magnetic energy to restore balance.

## **Soil**

Pollution in soil is trickier, depending on depth and intensity. But it’s still solvable. Once engineers embrace these concepts, they’ll rapidly develop ways to pulse polluted zones and neutralize toxins. The potential is enormous—especially when you consider how magnetic technology enhances the Earth’s own self-cleansing abilities.

And this isn’t just mechanical. Human consciousness plays a role too. Group intention, meditation, focused thought—all of these can amplify the process when combined with magnetic units. Technology plus consciousness equals exponential results.

## **EMFs**

When people interact with energy fields, changes happen both physiologically and energetically. Electricity and EMFs, particularly at the frequencies used in modern society, are not very compatible with the human body. Studies have shown how EMFs disrupt cellular processes, throwing off the balance of pro-oxidants, antioxidants, and reactive oxygen species. That imbalance cascades into inflammation, illness, and disease.

Why? Because our cells are extremely sensitive to the electron ratio inside them. When you tamper with that ratio through electromagnetic radiation, it disturbs not only the physical body but also the energetic body — the etheric field that surrounds and permeates us.

Electromagnetic smog—the byproduct of current electrical technologies—dampens perception of these interdimensional processes. But as society transitions toward natural, sustainable models of technology, especially magnetic energy, those dampening fields will fade.

### **Plastic**

Plastic pollution is a massive global problem. I don't need to tell you how serious it is. And let me be clear: there isn't a justification for our current use of plastic just because there's a way to get rid of it using magnetic energy tech. Corporations, especially oil companies, should still be held accountable for the environmental destruction they've caused. That's just my side note.

Now coming back to the complexity of plastic. Of course, there are thousands of different chemical formulas for plastic. Each has its own molecular resonance signature. Magnetic units can remove plastics down to the molecular level from oceans, rivers, soil, landfills — even our bodies. The implications of this technology are enormous.

And releasing it prematurely could be dangerous precisely because it is so powerful. That's why many believe it must wait until humanity undergoes a certain level of ascension in consciousness. But yes, pollution will end, followed by global environmental renewal.

### **Radioactive Material**

One of the most critical issues is our obsession with manipulating elements. From a magnetic energy perspective, altering naturally occurring elements creates serious problems. Natural elements resonate with higher-dimensional templates, drawing in etheric energy that supports life and balance. Artificial elements do not.

Plastics, for example, have no natural higher-dimensional template. They disrupt etheric flow. But the worst offender is radioactive material. When uranium is refined and processed into unnatural isotopes, you create substances that don't belong in nature at all. They have no higher template to feed them, so they distort the flow of etheric energy. And radiation doesn't just contaminate our planet—it travels through interdimensional magnetic rivers that connect solar systems, polluting beyond Earth.

That's why radioactive material is a galactic-level problem. It must stop. Magnetic technology can neutralize these substances, breaking them back down into nothing, but humanity should also stop manufacturing them in the first place.

The rule is simple: if it doesn't occur naturally in nature, don't make it.

## Part 8: Foundations of Existence (Matter & Life)

This age also brings the collapse of the old paradigm — the endless cycle of building and destroying, of extraction and exhaustion. Mining, pollution, exploitation — all of that ends. The old model will dissolve into one of creativity and transformation.

When we truly recognize the Earth as a sanctuary, and all life as sacred, we stop trying to control it and instead allow it to flourish. Magnetic energy can help us move into that kind of relationship, not only by supporting consciousness but also by providing sustainable technology — technology that produces goods and materials without strip-mining the planet or creating pollution.

Earth will be seen as sacred once more, her resources preserved, because our needs will be met by tapping the Ether directly.

### **Agriculture and Food**

In the future, agriculture will be transformed through a combination of magnetic technology, modifications of gravity and barometric pressure, and higher consciousness. Agriculture will harmonize with soil and sky. It will thrive with pulsing magnetic fields. It will shift from GMOs and chemicals to resonance-based cultivation.

Imagine this: unlimited water for crops. Growing conditions so perfectly balanced that plants reach their full nutritional potential. Resilient crops that withstand environmental stresses. Accelerated growth rates that far exceed anything we've seen before.

This is not fantasy — it's the natural outcome of modifying pressure and gravity through advanced magnetic units. That is how these breakthroughs manifest in physical reality.

Say goodbye to toxic pesticides, herbicides, and fungicides that leach into groundwater and poison waterways.

Say hello to magnetically encoded water that provides all the resonance factors crops need — without chemicals.

Naturally, the food we consume will also change. Food will nourish on all levels, enhancing vitality instead of weakening it. Our bodies will process nutrition with far greater efficiency. We will also learn to harness etheric energy directly for sustainability, reducing dependence on conventional food.

### **Body**

Blood plays a key role in our system. Think of it as a form of biological magnetic current. Blood carries a magnetic charge received through high-level etheric exchange, and that charge tells the heart to pump. The heart and blood have a symbiotic relationship: the blood fuels the rhythm, and the heart responds. From a magnetic energy perspective, the first step in healing is ensuring that a person's blood is

magnetically balanced—chemically, elementally, and energetically. Once it is, the heart automatically begins to function in harmony.

The magnetic pulsation of our blood will align more closely with our consciousness. We will be able to regulate heart rates at will — slowing them to near stillness for certain processes, or increasing them dramatically when needed.

Cellular decay will decrease while regeneration improves, changing the very nature of aging. Physical strength, age, gender—none of that matters anymore. Personal power shifts to psychic and energetic awareness. But in practice, even those abilities may be secondary, because the felt experience of oneness itself naturally prevents harm.

## Health

In this model, the human body is understood as a system of ionic exchange — powered by biological magnetic current, with electricity as just a byproduct. The body is sustained by a continuous pressure flow of encoded etheric energy.

It's long overdue for the medical world to start looking at human beings as systems of energy, and to treat everything from that perspective—especially from a magnetic energy point of view. Every illness has an energetic signature. Conventional medicine often relies on chemicals to override biological processes. These chemicals introduce dissonance into the system, creating side effects and long-term imbalances. When resonance is blocked, disease manifests.

Magnetic energy — specifically neutral magnetic energy flowing through neutrons and ions — is naturally compatible with biology. It enhances metabolic processes, strengthens the connection between the physical body and the energetic body, and supports balance. It works with the body's natural flow rather than against it. In simple terms, it helps us function the way we're designed to function. Moreover, it reaches beyond the physical, harmonizing layers of existence simultaneously. That is why it is so powerful—it doesn't just treat the body, it realigns the entire being.

Pharmaceutical companies, of course, fear this shift. Entire industries depend on ongoing sickness. And this technology doesn't just change health—it changes life itself. It redefines medicine from profit-driven symptom management to genuine healing. Doctors return to their true role: healers. Patients achieve optimal health without being buried under medical debt.

So, let's talk about some more applications of magnetic healing.

## Magnetoceuticals

Magnetic energy interacts with the body at a fundamental level, targeting causes of illness instead of merely suppressing symptoms. This is the principle behind magnetoceuticals—magnetic therapies that remove the root causes of disease. The future of medicine lies not in pharmaceuticals but in

resonance. Because when resonance is restored, health returns. This is true whether the issue is physical, emotional, or even interdimensional.

Magnetic healing will inevitably replace chemical medicine. Once resonance-based cures become widespread, people will no longer need to consume pills daily or suffer endless side effects. Healing will be direct, efficient, and natural. Pharmaceuticals will give way to magnetoceuticals that address illness at its energetic root. Medicine will no longer depend on pharmaceuticals but on energy-based solutions that align with the body's natural resonance.

Magnetoceuticals are already being researched in secret laboratories. Although much of this work is hidden, it will not remain so for long. As consciousness rises, demand for true healing will outweigh the structures of control that keep such technologies suppressed. Humanity will learn that disease is not an enemy to fight but a signal of imbalance to correct. Magnetic energy makes that correction possible.

### **Magnetic fields**

Another key concept is the role of neutral, rotating, pulsing magnetic fields. Energy transfers between dimensions through vortices. As these neutral fields ramp up in strength, they will directly affect our physiology.

Magnetic energy is the causative agent of change, while chemical processes in our cells are simply the effects. Current science focuses too much on chemical reactions, missing that they are downstream of magnetic resonance.

Once technology is able to measure and apply this properly, it will be clear: treating the body at the magnetic level is the key to triggering correct chemical responses and restoring balance.

Magnetic fields can also stimulate regeneration. There are already documented cases of accelerated healing when pulsed magnetic fields are applied to tissues. The heart and blood are especially responsive, because circulation itself is deeply tied to magnetic resonance. By adjusting the body's energy fields, we can trigger spontaneous repair processes that are currently thought impossible.

Say goodbye to artificial chemicals for biological and behavioral issues.

Say hello to pulsing encoded neutralized ions that the body naturally receives, balancing systemic and cognitive functions with zero side effects.

### **Detox/Resonance Chamber**

One of the challenges is that so much biological life already contains plastic — including humans. This technology could one day be used not only to clean oceans and rivers, but also to cleanse living organisms, humans included, of microplastics.

To address this, the devices generate a toroidal field that temporarily raises the resonance of nearby life forms. Fish and marine animals that have ingested plastics or toxins could be bathed in specific energy fields that allow their bodies to purge contaminants. This allows the plastic within them to be pulled out — right through their tissues and cells — without harm.

The same principle could apply to humans, in chambers designed to detoxify at the subatomic level. Picture magnetic healing chambers: people step inside, and within these chambers, gravity and barometric pressure are precisely modified to achieve specific results — whether that's regeneration, optimization, or even non-invasive forms of "surgery".

### **Cellular regeneration**

Magnetic energy is the future of healing — the future of surgery, interdimensional procedures, and spontaneous cellular regeneration. It marks the end of cellular degeneration as we know it. Eventually, newly unlocked genes and advanced immune systems will eradicate disease entirely.

Say goodbye to sugar-filled "dead water" in plastic bags used in hospitals.

Say hello to oxygen-enhanced, magnetically infused healing water, with an ideal mineral spectrum that supports regeneration in all biological systems.

### **Safer diagnostics**

As magnetic tech comes online, diagnostic procedures and equipment that rely on harmful radiation — like CT scans and x-rays will be replaced by magnetic resonance signature mapping. It will provide perfect, detailed readings of any physiological system, down to the subatomic level — AND it's completely safe and non-invasive.

### **Radiation**

One key concept here is our current scientific model's limitations. Today, radiation is categorized as alpha, beta, ionizing, or non-ionizing, but the real story lies much deeper—in the subatomic magnetic structures and their interaction with etheric energy.

Some radiation that has long been considered harmful will be revealed as transformative and beneficial, encouraging the process of transfiguration. Similarly, certain forms of radiation produced by magnetic energy devices—currently dismissed as dangerous—will be recognized as life-enhancing.

The difference comes down to whether the radiation blocks etheric energy or allows it to flow. Radiation refined in unnatural ways (like plutonium) creates blockages, while radiation templated in higher dimensions enhances life.

The truth is, incoming radiation in the near future will actually help humanity evolve.

## Pain management

Say goodbye to acute pain, chronic pain, and artificial suppression with chemicals.

Say hello to neutral pulsing magnetic fields that can automatically dampen nerve signals and stop pain until the root cause is fixed. This could even be worn as a device for continuous relief.

## A New Kind of Surgery

Say goodbye to invasive surgeries, long recoveries, and organ transplants.

Say hello to DNA pulse amplification with neutral magnetic saturation — a process that instructs tissues, organs, and bones to recombine and regenerate instantaneously without cutting or stitching.

## Personalized Treatments

Say goodbye to one-size-fits-all therapies that only treat symptoms.

Say hello to nuclear resonant matching with magnetic enhancement — subatomic realignment customized for each individual, targeting the direct cause of illness or imbalance.

## Real Healing

Physically, the human body will also adapt. Illnesses, injuries, and even chronic conditions will resolve much faster. Resonance-based living strengthens cellular processes, enhances regeneration, and extends longevity. Magnetic energy restores balance at the molecular level, allowing for vitality beyond today's norms. This does not mean immortality in the old sense, but rather the ability to live as long as one chooses, releasing the body when appropriate without fear or suffering.

Ironically, just as magnetic technology extends physical life, humanity will grow less attached to survival. We will honor incarnation as sacred, yet recognize it is not the ultimate definition of existence. Some will remain, some will reincarnate to help others, and some will leap into higher dimensions.

Say goodbye to long-term, often ineffective treatments for diseases like cancer.

Say hello to accelerated pulsing etheric magnetic energy that reconnects the energy body and the physical body, creating spontaneous realignment and purification of every system.

## Spontaneous Regeneration

Imagine someone has an injury—a broken arm or leg—or maybe an infection, virus, or even a cancerous growth. One of the first things we'd do from a magnetic energy perspective is place them in a **magnetic energy resonance chamber**.

- This would raise their vibratory rate, essentially phasing their body in and out of what we call “common reality.”
- At that higher vibratory state, practitioners could examine the person’s connectivity with their higher energy template.
- Broken or blocked connections would become visible and correctable.

That shift allows for spontaneous regeneration:

- Instantaneous repair of broken bones and damaged tissue.
- Immediate cleansing of viruses or bacteria.
- Instant removal of harmful or foreign growths.

No drilling, cutting, or stitching. No invasive process at all. Just working with resonant signatures within the body, correcting deficits, and bringing the physiology back into alignment with its energetic template.

### **Subatomic Components**

Now, let’s go deeper—into the **subatomic structures** of the body. Conventional medicine might describe inflammation or faulty ion channels in terms of “too many ions” or “cellular malfunction.” But treatments are typically **highly polarized**—strong medications or chemicals that force the body in one direction.

Magnetic energy, on the other hand, provides **neutral pulsing energy**. The body and energy body know exactly what they need; this neutral input gives them the freedom to self-correct. Once you can observe at the subatomic level, you can:

- Identify the root cause of inflammation—whether gluten, alcohol, smoking, sugar, or toxins.
- Trace blockages between the physical and energy bodies.
- Clear those blockages so energy flows freely again, restoring optimal health.

With that clear flow, we’re looking at “fountain of youth” possibilities—the ability to age at will, cure illness as it arises, and extend life far beyond what we currently believe possible.

### **Accountability**

Here’s another critical piece: magnetic energy makes **accountability possible**. If there’s a foreign growth in the body—viral, cancerous, or otherwise—magnetic energy allows us to identify its exact source.

No more cover-ups. No more manipulated studies. We could pinpoint whether contamination came from polluted water, toxic industrial practices, nuclear disasters, or other environmental toxins. That would hold corporations and governments accountable once and for all.

## A Paradigm Shift

Most importantly, it pushes us to embrace a new paradigm—one that views humans not as static, purely physical beings, but as **dynamic, energetic beings** existing across dimensions. With the right technology and consciousness, we can heal ourselves, maintain that healing, and live in ways that transform both our lives and our world.

With these changes, healing and perception will accelerate.

## The Bigger Picture

Pharmaceutical companies today have a crazy amount of control have over medical curriculums, the FDA, and doctors. They push pills, focus on treating symptoms rather than curing illness, and profit from keeping people addicted to medications that often have countless negative side effects. That entire model—economically driven and symptom-based—is ludicrous. God willing, it will come to an end sooner rather than later, replaced by a far more enlightened, advanced medical science rooted in magnetic energy practices and principles. Some of the advanced technologies that have been suppressed for decades will be finally be released into the public domain.

It's time for the medical industry to recognize people as multi-dimensional beings who function primarily on magnetic resonance. Just a small step into higher consciousness — combined with magnetic technology — will completely transform medicine.

But the implications go far beyond hospitals. Everyday life will transform. Agriculture, food, and water can all be magnetically tuned to enhance health. Buildings can be designed to support resonance rather than weaken it. Entire cities can be built to promote vitality. When resonance flows freely, disease has no foothold. Health will be the natural state, not the exception, as magnetic healing becomes universal.

The era of magnetic healing is not a distant dream. It is already beginning. As it spreads, humanity will move beyond the limitations of chemical medicine into a world where healing is natural, universal, and aligned with the flow of life itself.

## Part 9: Society and Civilization

### The End of Money

#### The Failing Economic Model

Look around at today's economic systems. They serve the rich and oppress everyone else. It's essentially global economic slavery, and history shows this is common in low cycles of consciousness. But that cycle is ending. Money, in its current form, has enslaved humanity — forcing billions into survival mode, week to week, paycheck to paycheck. Currency of any kind — cash, credit, or crypto — will eventually become unnecessary. Goods will no longer have "value" because everyone can have what they need.

The economic systems that fueled inequality will collapse. Wealth built on scarcity, competition, and control will lose its foundation. Abundance will replace scarcity, and social hierarchies will fade away.

#### Magnetic Technology: The Gateway

Even from a purely conventional point of view, magnetic technology — starting with the basic units already being discussed — are gateway devices. They open the door to hundreds, thousands, even millions of new inventions. That could mean jobs, income, stability, and growth. But once the door is open, there's no going back.

Eventually, this technology leads to:

- Anti-gravity
- Free energy, water, minerals, and resources
- The ability to replicate and assemble matter at will
- The end of scarcity

Magnetic energy is not just a new form of power; it is the end of scarcity. When scarcity ends, competition fades, wars lose meaning, and humanity begins to live in harmony with Earth, with each other, and with the universe itself.

#### What Will End

Scarcity-based systems of survival will vanish. Corporate greed will dissolve. Industries built on exploitation, profit at the expense of life, and control through scarcity will collapse. Without scarcity, corporations cannot manipulate populations. Without dissonance, their destructive technologies will lose meaning.

Money will no longer be the center of life. Goods and services will be expressions of creativity, not survival. Survival won't depend on money — so the heart becomes the guiding force.

As scarcity disappears, consciousness rises. People begin to live from the heart, not from fear or survival instincts. Motivation changes. Instead of working for a paycheck, people will feel compelled to create, to explore, to heal, and to contribute from a place of passion and purpose. That could mean music, art, exploration, or healing the planet itself.

### A Heart-Centered Economy

In the new paradigm, governments, corporations, and communities will transform:

- **Governments:** They will serve communities when needed, not control them, not hoard resources, and not enslave people with money.
- **Corporations:** They will exist to serve people, not themselves. With no scarcity, they will provide the highest quality goods and services without exploitation.
- **Communities:** Small, self-sustaining groups powered by magnetic microgrids will have everything they need — food, housing, energy, clean water, transportation. No more dependence on centralized corporations or governments. Competition and scarcity will vanish.

Life will no longer be centered on survival. Instead, it will be about creativity, joy, and contribution.

### A World Transformed

The new economic model will be radically different:

- Food becomes art and pleasure, not necessity. Some will even learn to live directly from etheric energy.
- Music and creativity will expand exponentially.
- Exploration goes beyond mining or exploitation; it becomes about healing the planet and venturing into the cosmos with respect.
- Work driven by fear of lack will dissolve. Instead of survival, people will work for joy, creativity, and contribution.

Humanity will create not to survive, but to express.

### Why the Elite Fear This

According to the sources that revealed this knowledge, neutrally based magnetic energy can never be abused or controlled by governments, corporations, or the wealthy elite. The balance between rich and poor will disappear, and abundance will be available to all.

Within the next decade, all currencies — physical and digital — will collapse. Digital money, in particular, is vulnerable because it depends on electronic systems that will not survive major planetary and magnetic shifts.

Land ownership will also dissolve. The Earth is not a commodity to be divided and sold; it is a living being we share. Communities will form around resonance with the land, caring for it and being sustained by it in return. The concept of private ownership will be replaced by stewardship and harmony.

The wealthy and powerful know what magnetic energy can do, and it terrifies them. Because it doesn't just disrupt markets — it ends money itself. When matter can be formulated from etheric energy, when food, housing, resources, and replication become possible, money has no role. Scarcity vanishes. Control through currency disappears. Humanity gains independence, autonomy, and sovereignty.

The elite will either rise with this new consciousness or fade away. There is no middle ground.

## A Positive Future

The transition may feel intimidating, but think of what it means: the end of economic oppression. With magnetic energy, humanity won't just survive — we'll thrive at a higher standard of living than this planet has seen in millennia.

That is the coming economic model: heart-centered, freedom-driven, creative, and sustainable. A system where scarcity is gone, money is irrelevant, and human potential is finally unleashed.

## Politics

Right now, the political scene is turbulent. Let's talk about what's really going on, because all of this is symptomatic of the magnetic resonance the planet has been under for thousands of years. That cycle is ending. With magnetic shifts underway, things are about to change radically.

It's a mistake to believe that what we see today — the conflict, the corruption, the division — is simply "human nature." Our incarnations are intimately connected to the magnetic resonance of Earth. As that resonance rises, so does our consciousness. Our emotional expression, our cognition, even our behavior — all of it shifts as the vibration lifts. The chaos we see now is the byproduct of a lower resonance, and it's coming to an end.

## Lies That Shaped Politics

To understand the transition, we have to see the old beliefs clearly so we can let them go:

1. **Empiricism** — the lie that physical reality is all there is. We're moving into *ethericism* — the awareness that we are immersed in neutral etheric energy that converts into magnetic energy and runs the universe. Technology proving this has long been suppressed, but that suppression is ending.
2. **Opposing Forces** — the belief that the universe is built on opposites: positive vs. negative, good vs. evil, north vs. south. In the etheric model, there are no opposing forces. It's all one flow:

inflow and outflow of the same source energy. Darkness isn't an opposing force to light; it's simply resistance to it.

3. **Isolation vs. Connectivity** – the belief that each person is a closed system. Politics thrives on this illusion. But the truth is we are open systems, constantly exchanging energy with each other and with the universe. We are interconnected, always.

These lies form the basis of political systems built on scarcity, conflict, secrecy, and control. But as the resonance rises, those structures dissolve.

## The Politics of the Future

What comes next?

- **No more parties.** The best aspects of both sides merge, and “politicians” become true public servants. They act out of calling, not profit or control.
- **No more secrecy.** With expanded consciousness and new technology, everything becomes known. Cover-ups and manipulation can't survive.
- **No more scarcity.** As scarcity fades, so does corporate control, so does money. Leadership becomes about service, not survival.

Selections won't be about votes in the old sense. People will *know* from their heart-space who is right for a role, and it may be several individuals working together. It won't be about winning or losing — it'll be about serving.

Light workers will play a key role. Their heart energy will be amplified, their guidance accelerated. They'll help others rise, removing blockages and lifting consciousness. Together, they'll transform politics into a heart-centered system rooted in truth, service, and openness.

## Navigating Today's Conflict

So how do we deal with politics as it stands now — polarized, combative, unsolvable?

- **Stay neutral.** If you grip too tightly to one side, your energy gets trapped in polarity. Neutral energy opens the door to higher awareness.
- **Vote from the heart.** Even if it doesn't make rational sense, following your heart in turbulent times raises vibration and aligns with the bigger plan.
- **Practice neutrality daily.** Meditate, center yourself, and tune into higher awareness. That's how creative, lasting solutions emerge — not from the polarized mind, but from the expanded heart.

The current system is just the last gasp of a low vibration cycle. We're moving through the darkest part before the dawn. And as we rise into higher resonance, politics will no longer be about manipulation and conflict, but about heart-centered service, truth, and collaboration.

So, stay grounded, stay neutral, and keep your heart open. That's the best political act you can make right now.

## Power

First, let's talk about power. Our future power system will be unlimited wireless energy that not only sustains life but actually creates beneficial energy fields around the planet. Just that alone will change everything. The devices and power plants that generate this energy will rely on controlled modifications of gravity and subtle pressure shifts to maintain balance and flow.

Say goodbye to electron-based circuitry.

Say hello to **ion-based circuitry powered by neutrons**, drawing on a never-ending interdimensional stream.

Say goodbye to electric motors.

Say hello to **self-powered magnetic motors** that convert neutrons into infinitely versatile ions.

Say goodbye to centralized electrical grids and wires.

Say hello to **free energy generation** directly in homes and communities, with wireless transmission of etheric magnetic energy when needed.

Say goodbye to centralized water supplies.

Say hello to **on-demand magnetic water generators** in homes and communities that create fresh water instantly.

## Communication

Communication itself will change. As higher-dimensional perception grows, we will move beyond devices and wires into natural, vibratory, etheric connection — communication that is universal, pure, and interference-free. Once that door opens, there is no going back.

Communication will expand beyond language. Telepathy and vibrational exchange will become common. Humans will speak directly with animals, recognizing them as conscious beings. The barriers between species will fall away as resonance reveals the unity of all life.

## Manufacturing

Manufacturing itself will be completely decentralized. Each individual and community will hold the ability to create, recreate, and reformulate anything they need at the highest standard of living.

Individuals will have access to technology that allows them to replicate or reformulate virtually any

item needed for daily living. Goods will no longer be restricted to factories or supply chains; they'll be created directly from etheric magnetic fields, guided by anti-gravity and pressure modification technologies. These forces will be the key to reshaping systems and achieving results we can hardly imagine today.

This is where replication comes in — producing matter directly from energy. It's not theoretical; experiments in labs around the world have already hinted at this, with gravity and pressure anomalies showing up above and below those sites. These anomalies aren't accidents — they are part of how the technology functions.

### Transport

Next is transportation. We're looking at a future that includes **full anti-gravity travel, interdimensional transportation, and even teleportation**. Anti-gravity technology won't just be for large systems; it will extend to **personal use**, giving people entirely new ways of moving through the world. Stronger gravity fields will have their own unique applications, while lighter fields will open doors to new forms of freedom.

Etheric magnetic technology, which harnesses neutrons and ions, can maintain the proper etheric magnetic flow. That allows it to safely interact with biology for certain uses — like enhancing force fields or modifying gravity for travel through different mediums.

This means magnetic technology can help us adapt to zero-oxygen environments, underwater travel, or even moving safely across planets.

### Friction & Motion

Say goodbye to endless struggles with friction coefficients in material science.

Say hello to **total control of friction** — magnetic fields that can deadlock materials in place or eliminate friction altogether. Imagine the implications for transportation and industry.

Say goodbye to burning fuel for transportation.

Say hello to **ionic and magnetic propulsion** that taps inexhaustible etheric fields.

Say goodbye to conventional limits of velocity and acceleration.

Say hello to **magnetic inertia dampening and counterbalancing fields** that allow for beyond-light-speed travel.

### Logistics & Supply

Say goodbye to shipping delays and supply chain issues.

Say hello to **in-home and community teleportation units** — capable of sending and receiving supplies, edible and non-edible, 24/7.

## Engineering

More and more people around the world are waking up to how unsustainable our current systems are, and many of the concepts I'll touch on are already being worked on quietly in labs. The future is building toward this, and it will come out.

So, here we go:

Say goodbye to nuts, bolts, glue, and heat to hold things together.

Say hello to **molecular binding at the subatomic level** using pulsing magnetic fields, creating bonds stronger than the original materials themselves.

Say goodbye to conventional injection molding and 3D printing.

Say hello to **instantaneous interdimensional material formulation** with crystalline lattice structures that harness etheric magnetic energy — a total revolution in material science.

Say goodbye to old stress-and-strain calculations for construction.

Say hello to **quasi-crystalline alloys with stabilizing magnetic fields**, delivering incomprehensible strength and resilience.

And finally — say goodbye to the polarizing age of the electron.

Say hello to the magnetic age of the neutron — expressed through ions, bringing a whole new foundation for engineering and technology.

## Infrastructure

In the future, much of what we see today will be dismantled:

- Power grids will be taken down and disintegrated into harmless energy.
- Cities, roads, and waste systems will be deconstructed magnetically and reformulated into non-toxic forms.
- Current building materials — many of which block etheric and magnetic flow — will be replaced with life-affirming structures that enhance vitality. Buildings will breathe with the environment.

The Earth itself will become a sanctuary again, thriving with ecosystems and species, as humanity shifts to minimal impact and greater respect for the planet.

## Artificial Intelligence

AI is everywhere right now. At our current level of consciousness, AI does have value. It can:

- Help us with practical tasks
- Generate art, music, or words
- Organize and process information we can't handle on our own

Across the universe, it's actually very common for species to reach a stage where their technology advances, but their consciousness doesn't. They still live in separation and polarization, disconnected from universal consciousness, disconnected from other life — both on their planet and beyond.

In that state of mind — and it is a state of mind, not of heart — species create things that don't last in the universal network. AI is a perfect example of that.

Now I'm going to take this way out into the cosmos for a minute. During meditation and out-of-body projection, I often travel upward through dimensions. At the twelfth dimension, you enter the universal mind — the great network of consciousness beyond space and time.

Recently, I brought information from AI into that space, just to see what would happen. The result surprised me. The universal mind did not recognize it. No matter how I tried, the information from AI had no resonance there. That taught me something important: the source of information is just as important as the information itself.

Information straight from AI remains contained in our limited sphere of global consciousness. It doesn't ripple beyond it. From a universal perspective, AI is not recognized unless it moves a human being into their heart center. When AI sparks you to write, play music, create, love, or act from your heart, that contribution is recognized in the universal mind. Why? Because it comes from you — your heart, your consciousness, your eternal self.

What you create from the heart lives forever. It becomes part of the universal tapestry.

### Testing AI with the Heart

Here's a practice: take anything generated by AI — a poem, a piece of art, a song, even a conversation — and place it into your heart's holographic field.

Watch what happens:

- Does it resonate?
- Does it grow brighter and more vivid?
- Or does it fade and resist?

Your heart will tell you whether the creation carries truth, whether it has value beyond this limited dimension. AI can be a tool, but it cannot replace the heart.

### The Proper Role of AI

Artificial Intelligence and advanced systems will be guided by principles of resonance. Instead of being tools of control, they will serve the well-being of all. The question will not be whether technology is profitable but whether it enhances life and reflects love.

As interdimensional technology advances, humanity will both expand AI and also limit it. Why? Because we'll discover the infinite depth of our consciousness — what people might call the soul. And that depth is virtually impossible to replicate artificially.

Artificial intelligence will eventually be replaced by universal intelligence. Unlike AI, universal intelligence isn't limited by technology. It can access all information and all events — past, present, and future.

So yes, there will be uses for AI. But its proper role will involve magnetic technology — technology that locks into specific pulse parameters to safely enable advanced feats. That's the future we're heading toward.

### **Transhumanism**

This is about AI and transhumanism, especially the whole idea of brain uploading. It's natural to want advancements in technology, enhancements of human abilities. But here's the truth: freedom doesn't come from being uploaded into machines. It comes from realizing that evolution in consciousness accomplishes the very same goals — and does so far more effectively.

Consciousness relies on an interdimensional exchange outside of space and time. Our human condition is only one piece of a vast network of consciousness — and that connection must not be broken.

A neural network interface must maintain a continuous etheric magnetic flow to sustain a connection to consciousness. An electrical interface will never suffice. Electrical technology simply isn't compatible with the human body or consciousness.

This is why trying to connect consciousness to an electrical network won't work. The so-called electron can never provide the foundation for transhumanism. It will only lead to disease and death, because electrons are not etherically and magnetically balanced. They cannot flow in and out of dimensions the way consciousness requires.

As humans recognize their true nature, they'll see their eternality. And once we understand that we live forever, we'll lose the desire to be "uploaded" into technology. Why confine yourself to a device when you can move freely through incarnations, dimensions, and realities?

Consciousness itself is the key. It unlocks evolutionary physiological enhancements and abilities that no technology could ever replicate. And when technology is needed for certain tasks, we'll use it wisely, safely, and in harmony with that higher awareness.

## Part 10: Human Experience and Inner Dimensions

### Consciousness

We're now going to touch on magnetic energy and its connection with consciousness, which inevitably brings in some metaphysical concepts too.

Over the last hundred years — and really, much longer than that — our technology and our level of consciousness have walked hand in hand. By “consciousness,” I mean our awareness: awareness of ourselves, of each other, of other dimensions, and of our interconnectedness with all life. Up to now, mainstream science has generally kept that awareness quite limited, focusing mostly on electricity and the electron-based model of energy.

But as we move into a new age — one of higher consciousness and rapidly evolving technology — magnetic energy and consciousness become deeply intertwined. The fields produced by neutral magnetic energy don't just support our physiology; they raise our vibration at an energetic level. They enhance our awareness, our sensitivity to other people, to nature, to the planet itself.

This is where spirituality and technology begin to synthesize. This is the dawn of the Aquarian Age, the Age of Magnetic Energy, and it is both exhilarating and transformative.

### Expanding Self-Awareness

The veil of secrecy is lifting. Raising magnetic resonance raises consciousness. It raises awareness. It heightens our interdimensional sensitivity. It's almost like entering a new level of the video game of life — or advancing to the next stage in the Matrix. We are rediscovering our interdimensional, eternal selves.

Human perception will awaken beyond the limits of the five senses. Right now, most people live at a level that could be called simple self-awareness. But as consciousness expands, self-awareness grows into something much greater:

- The ability to sense other people's energy.
- The ability to sense the energy of plants, animals, and nature.
- The ability to see beyond the physical world into interdimensional exchange.

We're already seeing — and many believe — that humanity is entering a higher state of consciousness. This evolutionary process is not caused by magnetic technology, but the technology certainly supports and amplifies it. As our awareness expands, our sense of interconnectedness deepens.

We will feel etheric energy within and around us, expanding awareness of the unseen. Our “sixth sense” will become second nature. We will tune into planetary, water, plant, and animal consciousness, expanding far beyond the physical plane.

Moreover, the continuous exchange of etheric energy between bodies, systems, and dimensions will become part of the scientific worldview. Consciousness will be recognized as eternal.

### **Energy body**

In the conventional model, we have molecular structures, subatomic parts, and then, at the most fundamental level, the core structures of those subatomic components.

These core structures are infinitely complex. Energy flows in and out of them at incredibly high rates. Some change constantly, others maintain their form while still shifting as energy interacts with them.

Inside those subatomic cores, you have intricate 3D sacred geometries, always changing, always updating. That is the magic—the secret of how the universe works, how life works, and how the subtle energies within and around us flow.

From this perspective, we are always juggling two things: our physical body and our energy body. Energy flows continuously from higher dimensions into our physical form, right down to our DNA, fueling our systems.

As higher vibratory magnetic energy flows into our solar system, our energy bodies will become more vibrant and intense. We will no longer see ourselves merely as physical beings. Instead, we will recognize ourselves as eternal energetic beings temporarily inhabiting bodies. This will transform how we view life, nature, and our place in the universe.

Diet plays a role here too. Organic, non-GMO foods carry higher life force, which strengthens the link between your physical and energy bodies. And then there are practices like yoga, tai chi, drumming, or even sacred dance—all of which elevate vibration and reinforce that connection.

In meditation, it's important to be aware of both bodies—how they connect, how energy flows between them. We are multi-dimensional beings. Anyone who denies that will eventually see the truth, because the awareness of it is rippling outward. By the end of this process, we will experience new forms of embodiment—higher vibratory, genetically transformed, and more deeply connected to higher-dimensional realities.

### **Energy grid**

There are energy vortices all over the planet that people visit to meditate, to have spiritual experiences. But when we move into the magnetic age — into the crystal age — we're going to take that to the next level.

What will happen is this: we'll identify the specific magnetic resonance of each one of these vortices, and we'll place technology around them. The key is using neutral magnetic technology. That means identifying the neutral magnetic pulsars of these vortices while preserving their natural resonance.

Why? Because in the future, these sites will be used for transportation — teleportation, not just of people but also goods, food, and products.

That's why communities will be built around these energy vortices. Once we enhance their power and interconnectivity, we'll be able to use the natural global system that already exists. With just a small shift in human consciousness, we'll be ready to tap into it.

Some of this will involve magnets and magnetic technology placed at these vortex sites. But more importantly, there will also be non-moving parts, like crystals charged with the resonance of those specific areas. When enhanced, the energy will flow naturally from one site to another, creating an attract field.

This is powerful technology. By tapping into the Earth's energy grid, we'll not only power communities — especially through crystal-based technology — but also interconnect the entire planet through the natural grid.

Right now, that energy is already starting to ramp up. One thing you can do is visit these sites yourself. Tune into them meditatively. Bring resonant tools like tuning forks or bowls. All of those metaphysical instruments will start to play an important role.

And as we transition from frequency into magnetic pulse rate — once this technology is released — everything will accelerate exponentially.

Take the time to explore it. Go with your heart and your guidance, because this synergy is only going to keep building.

## Emotions

The emotional structure of humanity will also change. Fear, competition, and conflict will no longer dominate. Instead, love, cooperation, and unity will define relationships. The New Human Being will live from the heart, guided by resonance rather than ego. Ethics will no longer be enforced externally through laws, but will arise naturally from expanded awareness.

In a society of resonance, healing accelerates. Old wounds and resentments release quickly, as the higher vibratory energy flows through us. Resentment, regret, and anger are no longer burdens to be carried, but waves of energy passing through. The new frequencies support us, heal us, and remind us to live in flow.

As etheric pressure builds, it will become undeniable that the heart is our strongest energy center. Society and relationships will shift to reflect this truth. Ego-dominated societies will fade. Heart-centered living will rise. The universal light now streaming into our world will burn away greed, corruption, fear, hatred, oppression, and control — not just here on Earth, but interdimensionally.

## Healing the Fractures of the Self

In this model, low-vibration emotions like fear, resentment, or anger create fractures in our energetic field. They don't align with our true nature, so they splinter us.

The practice isn't about forgiving everything or pretending the pain never happened. It's about **surrounding each fractured part of yourself in unconditional love.**

Maybe it's a painful childhood memory. Maybe it's betrayal. Maybe it's anger at governments or corporations. Whatever it is — instead of judging or resisting it, bless that part of yourself. Surround it in love.

That's what raises its vibration into alignment with the energy of ascension.

The request here is simple: Train yourself so that whenever a low-vibration emotion arises — hatred, bitterness, fear, anger — your immediate response is to bathe that part of yourself in unconditional love. This stops new fractures from forming and helps restore wholeness.

And once you can do this for yourself, extend it outward. Surround your family, friends, even strangers around the world with that same energy.

## Why It Works

Unconditional love is the **great alchemizer**. It transmutes, heals, and unifies. It aligns us with universal energy and prepares us for the vibration we're about to enter.

For those of you called to be conduits, this practice empowers your affirmations, your visualizations, and your role in this shift. You'll know you're on the right path when your heart expands, when you feel lighter, more whole.

## Relationships

The love that once seemed confined to family or close relationships will extend outward, encompassing neighbors, strangers, and even other species. Humanity will begin to live love as a universal ethic.

Everyday living will reflect this transformation. Friendships will deepen, and community bonds will strengthen, all flowing from love as the foundation.

## Love in Relationships

This one is about love and relationships — how they evolve along with human consciousness. We're entering a time of dramatic changes, and relationships will shift right along with that. Relationships will evolve beyond possession, control, and fear of loss. Partnerships will be based on resonance—on shared frequency and mutual growth—rather than obligation or societal expectation.

When two people connect from their hearts—when their resonance synchronizes—their combined energy multiplies. Together, they can channel extraordinary power: healing, creating, even accessing higher abilities that sound superhuman from our current perspective.

This is what people have called “soulmates” or “true love,” but amplified many times over. When hearts align, abilities expand, and together they can uplift not only themselves but the world around them.

But we don't have to wait — we can start living this way right now.

So how do we navigate relationships? How do we find love? How do we solve problems without falling into all the psychological traps society constantly pushes on us — traps that create stress, fear, anger, and confusion?

## Using the Heart Holographic Field

Anytime you face conflict in a relationship — fighting, tension, miscommunication — or even when you're considering a new relationship, try this:

- Take the issue and surrender it into your heart's holographic field.
- Let it sit there, let it marinate.
- Watch as the problem dissolves and an elegant solution begins to present itself.

This practice is incredibly powerful for:

- Shadow work
- Spiritual bypassing struggles
- Gaslighting dynamics
- Any deeply rooted emotional issues

The heart space reveals solutions in ways the mind alone cannot.

## Creating Aligned Relationships

When it comes to new relationships, surrender your search into the heart holographic field. The heart may show you an image, a sense of compatibility, or guidance on what's needed in your life right now.

These connections aren't just random — they ripple across all lifetimes, across dimensions, weaving into the universal tapestry. By surrendering to heart guidance, you co-create relationships that exist beyond space and time, relationships supported by universal love and consciousness.

You can also surrender your current relationship into the heart field. See what happens:

- Does the heart show you how to heal it?
- Does it raise the connection to a new level of love?
- Or does it gently guide you toward letting go and moving on?

The key is surrender. Let the heart's wisdom lead instead of the scattered wants and polarizations of the mind, which often pull us into relationships that go nowhere — loops of dead ends. They still teach us lessons, but the heart can guide us into relationships aligned with higher consciousness.

## The Future of Love

This is the future of relationships: guided by the heart. As this energy grows stronger, we'll know without a doubt when we're with someone we're truly connected to at the heart level.

With that kind of connection, our abilities expand dramatically:

- Paranormal experiences shared together
- Exploration beyond space and time
- Access to other lives, other dimensions, even other worlds

Relationships will become far more than companionship. They'll be a pathway to higher consciousness and universal connection.

That's where humanity is heading.

## Cosmic Family

We are living in the final days of ignorance. This dark period of reductionist science is ending. A new awareness is rising — one that redefines our existence as part of a galactic community. Long-dormant relationships, both cosmic and interdimensional, will reawaken.

This topic is a little different—it's more metaphysical than scientific—but it still connects back to the magnetic energy model, and you'll see how.

## Who We Really Are

The information I'm sharing comes from experiences with higher beings—guardians of our realm—who spoke about our Cosmic Families.

If you imagine your higher self, or soul, as an overseeing energy body, then from that level new beings can be created. Just as in the physical world we give birth, in the etheric world energy beings can generate other energy beings.

This creates a vast lineage stretching over millions of years. Our true nature is eternal, and so is our Cosmic Family.

## Recognizing Cosmic Family in This Life

When we incarnate, we sometimes meet these beings in physical form. The connection is unmistakable: profound, deep, eternal.

It may appear as:

- a parent or child,
- a sibling,
- a partner or spouse,
- or even a close friend with an unexplainable bond.

These connections often feel otherworldly because they *are*. They are reminders of our family at the cosmic level.

Sometimes, circumstances prevent physical relationships with our Cosmic Family—distance, life paths, or other challenges. But even then, the bond is there, and we can connect with them energetically.

## Why These Connections Matter

As we move through the Ascension process, our ability to sense and connect with our Cosmic Family strengthens.

These connections matter because:

- They amplify our abilities—what we might call paranormal or extra-dimensional.
- They open the doorway to creation itself: forming matter from the etheric realm, dissolving matter back into it, and replicating it.
- They accelerate our collective evolution, especially as humanity moves into heart-centered living and beyond survival into thriving.

In short: connecting with Cosmic Family supercharges our growth as a species.

## Ways to Connect Right Now

Even if you cannot be with them physically, you can connect at the etheric level—right now.

You can do this through:

- Heart-centered meditation.
- Visualization.
- Astral projection.
- Lucid dreaming.
- Consciousness exploration practices.

Information flows both ways. Guidance, love, and insights can be exchanged regardless of physical distance.

## Cosmic Family and Ascension

As mass consciousness rises, these connections will become easier and more common. For now, practice is the key.

Make Cosmic Family part of your daily awareness. Whether it's through meditation, quiet reflection, or even something as simple as reaching out to a person you sense that bond with—engage with it.

These relationships—both etheric and physical—support the Ascension process. They help prepare us for the stages of transformation that are unfolding.

Many of you may already be adept at this, but for others this may be a new perspective. Either way, awareness of your Cosmic Family is powerful.

So, connect, however you can. It will help you grow, it will help you ascend, and it will help our planet evolve.

## Free Will

Now, I know... free will is one of those huge topics that sparks debate whenever it comes up. (And no, nothing here diminishes the epic song *Freewill* by Rush—that remains untouched.)

### The Idea of Free Will

The concept of free will often rises strongly during low-vibration cycles—times when consciousness and magnetic resonance on a planet are at their lower points. In those periods, people tend to embrace philosophies of isolation and empiricism: the idea that we are nothing more than physical bodies, separated from everything else.

From that limited perspective, it feels like we have free will—“I can choose this, I can choose that.” But in truth, those choices take place inside a very specific set of parameters.

Think of it like this:

- We have the **physical body** that incarnates.
- Behind that is the **energy body**, which interfaces with and powers the physical body.
- Beyond both of those is the **true self**—our higher being, existing outside of space and time, connected across dimensions.

That higher self is not acting alone. There are often other beings, guides, or what we might call “stakeholders,” who also have an interest in a given incarnation or series of incarnations. Together, choices are made about what must be accomplished in a lifetime: relationships, growth, tasks, and certain experiences.

So yes, there is free will—but it’s more accurate to say it exists primarily at the higher level, where those decisions are chosen with great intention.

At the physical, incarnated level, we can make choices—but those choices are framed by the larger path already agreed upon. That’s why sometimes no matter how hard we push for something, it doesn’t happen, or circumstances push us onto another road.

It’s not “life doing this to us.” It’s the embedded magnetic resonances—the pre-polarized patterns within our energy and physical bodies—that guide us toward the experiences our higher selves already chose.

So how do we align ourselves with the path we truly chose? Through the **heart center**.

The heart is the direct connection to universal intelligence, to higher consciousness, to the true path. When we tune in, meditate, or simply listen to that resonance, it shows us the direction that was chosen not from ego, but from the higher self.

As Earth’s magnetic resonance rises in the very near future, more people will find their hearts pulling them toward those higher paths. Resistance will feel heavier, while alignment will feel lighter and more expansive.

We also need to remember: we’re not isolated. From a magnetic perspective, humanity is a **global organism**. Millions—even billions—of beings chose, together, a path of rising consciousness.

So while an individual incarnation might insist, “I have free will, I’ll go my own way,” eventually the collective resonance prevails. We are deeply interconnected, and in higher states of awareness, this truth becomes undeniable.

The realization will grow: our choices ripple instantly into the collective, and the collective guides us back into harmony.

### The Surrender

So what does free will really look like? At the higher self level, it's expansive and intentional. At the incarnated level, it looks more like **surrender**—surrendering the ego, listening to the heart, and flowing with the path we already chose at a higher vibration.

That surrender isn't defeat—it's the gateway to profound experiences, expanded awareness, and participation in a grander collective evolution. It's how we heal this planet, move beyond scarcity into thriving prosperity, and step into an age where higher consciousness guides both technology and daily life.

Free will, then, isn't about random choice in isolation. It's about aligning with the heart, with the true self, and with the larger organism we're all part of. That's where the real magic lies.

### Religion

This one is about religion — and how the heart space and universal consciousness fit into the religious models on our planet today.

So many of the current models are built on fear, guilt, and restrictive ideologies. These don't really nurture the evolution of consciousness on Earth. As we move into the coming transitions — the expansion of awareness, the ascension process — we're going to start seeing through the holes in religious systems. We'll see through the lies, and we'll begin creating belief systems that are heart-centered.

Why? Because heart-centered consciousness naturally connects to the universal network — the universal mind, the universal heart, the creator force. From that perspective, we'll start to recognize how the deeper truths behind sacred texts and philosophies actually align with the heart center, and where they don't.

Religion, too, will transform through love. Religions that once divided will give way to direct experience of the divine within. The separation between spiritual and physical life will dissolve.

Doctrines that once divided people will dissolve in the recognition that all are expressions of the same universal consciousness. Doctrines will be replaced by direct connection with the divine within.

Spirituality will no longer be controlled by institutions but will be lived as daily awareness. Every person will know their interdimensional nature, and love will be the universal ethic.

Living in love will replace belief in separation. The divine will be understood not as a distant power but as the resonance of love flowing through all existence.

### **Practicing with the Heart Field**

You can try this right now. If you're part of a religion, curious about one, or simply exploring spirituality, bring that belief system into your heart's holographic field.

Does the image of that religion grow brighter, more colorful, more alive? If yes, it resonates with your heart, and there may be value there for you to explore.

Or does it fade away, turn gray, crumble, or resist? That shows little resonance with your heart energy and the universal consciousness it connects to.

Some religions simply don't resonate when filtered through unconditional love. If a belief system thrives only on fear, guilt, or obedience, your heart will likely push it away. That's powerful guidance.

When you surrender belief systems to the heart, you see clearly what connects to universal consciousness and what doesn't. You tap into the total mind — the infinite energy of the universe — and begin to recognize which teachings carry truth and which dissolve when exposed to love.

The path forward isn't about clinging to one ideology or another. It's about gathering the best from all traditions, bringing them into neutrality, and letting love — unconditional love — be the foundation.

That's where humanity is heading.

## Part 11: Expansion and Evolution

### Astrology

This is the age of magnetic energy, arriving in harmony with the age of Aquarius. Pluto's entry into Aquarius marks a shift in astrological cycles, and that timing aligns with the emergence of magnetic energy as a guiding force.

First, a quick note: I'm a big fan of astrology in all its forms, so none of what I'm about to say is meant to dismiss traditional models. Instead, I want to share a perspective from the magnetic energy point of view—how it relates to astrology, and where it may take astrology in the future.

From this perspective, every object in the universe carries magnetic resonance—layers of frequencies, not just one. Here on Earth, some influences are especially strong. The Moon is one. Its impact is not only gravitational but also magnetic, through a powerful vortex of energy flowing between the Moon and Earth.

That influence is at its peak when the Moon reaches **apex**—directly overhead. At that exact moment, the concentration of energy is the strongest, and its transformative, alchemical, and even magical effects are amplified. The Sun works in a similar way.

Now, think of the stars behind the Moon or the Sun at those moments. Their magnetic resonance also gets magnified. This means that the constellations positioned along the path of the Sun and Moon—the stretch between Cancer and Capricorn—carry especially direct influences.

But the story doesn't end there. Stars throughout our local galaxy also affect us. Each has its own magnetic resonance, and when a star reaches its apex position over Earth, its energy is strongest. The further it moves from that point, the more the influence tapers off.

### Higher States of Consciousness

As Earth's vibration rises in the near future, our awareness will expand with it. People will naturally begin tuning in to these subtle magnetic resonances. What seems now like a level of complexity requiring a supercomputer will become second nature. In higher states of consciousness, we will act like living supercomputers, feeling and knowing these influences directly.

This shift will transform astrology. For example, at the moment of **conception**, parents will be able to sense when and where the planetary and stellar influences are right for a new soul to enter. They will travel to precise places on Earth to align with those energies.

The astrological imprint at conception will become the most significant influence in shaping a person's path. Even before birth, the energy body of the child connects with universal resonances, and parents

in higher states of consciousness will be able to feel those key moments—conception, deeper soul connection, and eventually birth itself.

Each of these points will be seen not as random, but as carefully aligned with magnetic and astrological energies.

### **The Future of Astrology**

Astrology in this future state will be far more than charts of zodiac signs. It will include the influences of planets, stars in our galactic neighborhood, and even more distant bodies when their resonance is strong. Conjunctions, alignments, and apex moments will be deeply understood, and people will intuitively know how to work with them.

Rituals under the full Moon have always carried power because of these amplified energies. In the future, we'll recognize this not just as tradition but as resonance—the magnetic pulse at apex magnifying the background influence of the stars and constellations.

It's astrology taken to the next level, infused with magnetic energy, higher awareness, and conscious participation.

So, when you think about astrology from this point of view, imagine not just the signs we know today but a much broader tapestry of resonant energies—all of them influencing life on Earth. It's a future where astrology becomes both scientific and spiritual, precise and intuitive, and far more powerful than we can currently imagine.

### **New Light Spectrum**

This topic is about the new resonant frequencies — the new frequency spectrum that we'll soon be entering into.

Right now, we're very accustomed to a certain range of frequencies in this dimension. That spectrum is the foundation of our experience of reality. But when the magnetic resonance of our dimension changes, our experience of it changes too. It doesn't necessarily mean we're "going up" into another dimension — rather, the dimension itself is being modified. And that means we'll be living in a whole new frequency spectrum, one we aren't used to on this planet.

When the frequency spectrum changes, it alters everything: gravity, light, sound, heat, electromagnetic fields, even our perception of nature itself. We'll see things that have been invisible until now.

### **New colors**

The color spectrum in this new resonance is unlike anything we currently know. New colors will emerge that can't be described using the language of our current color wheel. The colors aren't like our familiar greens, yellows, blues, and purples. They just don't fit into "red, green, blue" or any of our

familiar categories. They're something completely different — and describing the new spectrum is almost impossible. You only understand them when you actually experience them and it's mind-blowing to realize that reality itself can shift in this way. It's a completely fresh experience, and it affects everything — our DNA, our brainwaves, our eyes, even how we hear and perceive reality.

The old light spectrum, the electromagnetic fields we rely on now, will fade into the past. Technology itself will look and function differently. This is why certain highly sensitive people — those who claim to see auras — sometimes get glimpses of what's coming. In the future, that won't be rare or unusual; it will be something everyone experiences.

### New human

This topic explores what humanity will become after Ascension—the emergence of the New Human Being. The transformation is not limited to external society; it is a fundamental shift in who we are and how we experience existence.

The shift into becoming the New Human Being is not a dream for some distant future. It is already underway. Every person who opens their heart, embraces resonance, and lives in love is participating in this transformation. The New Human Being is being born right now, in this generation, as Ascension unfolds.

### Paranormal

The New Human Being is defined by expanded consciousness. No longer limited to the five physical senses, humanity will perceive energy directly, communicate interdimensionally, and engage with life on levels previously hidden. This change will also let us perceive energy exchanges more clearly — between people, between humans and animals, between plants and all of life. Telepathy, intuitive knowing, and vibrational sensitivity will become natural abilities rather than rare exceptions.

Humanity will relearn the art of exporting consciousness — projecting awareness into other realms, even quantum realms. It opens the door to paranormal abilities that once seemed impossible: out-of-body experiences, levitation, telekinesis, teleportation, interdimensional communication, and more will spread through society — taught, shared, and eventually normalized. What we once considered "paranormal" will be recognized as simply normal human capability.

We also develop greater abilities: molecular coordination, the capacity to influence matter and energy with consciousness.

We'll actually be able to see how energy flows and interacts with life. For example, we'll see how electricity drains people, plants, and animals. We'll see the way it interferes with our energy fields.

With this expanded vision, we will finally grasp both the extent of damage caused by destructive technologies and the means required to repair it.

## Part 12: Beyond Earth (Cosmic and Interstellar)

### Gravity

The conventional understanding of gravity is deeply flawed.

- **Gravity is not a function of mass.** Objects only appear to have mass when energy flows through them. Mass is a byproduct of energy resonance, not an inherent property of matter. In truth, gravity is a pulsed magnetic exchange.

Every planetary body, star, or galaxy is surrounded by an energy field. Within that field exists a circuit—energy flowing from outer rims inward and then redistributed. On Earth, energy flows from the upper rim through the atmosphere to the inner rim within the planet. These flows are pulsed at specific frequencies.

When those pulses are interrupted, the circuit breaks. So, for example, on this planet, around 21,000 neutral magnetic pulses per second will create anti-gravity effects. And if you go up or down from that, you'll start to see different effects. That's huge—because it means you can have variations of anti-gravity depending on the pulse rate you're working with. That is, by generating counteracting fields, gravity can be nullified, reversed, or even intensified.

This is the principle behind weightlessness and anti-gravity technology. Rockets are unnecessary when vehicles are powered by etheric magnetic fields. Interplanetary and interstellar travel becomes simple when gravity circuits are bypassed.

The anti-gravity circuit extends outward—from the outer ionosphere, even beyond into space, and also down into the Earth. It's a push-pull phenomenon, with separate forces interacting. That's the circuit you're dealing with when it comes to gravity modification.

- **Gravity is not an obstacle.** It is an expression of universal energy flow. By understanding its magnetic nature, we gain access to technology that revolutionizes transportation, industry, and even human potential.
- **Gravity also operates through interlocking vortices.** For example, Earth's moon is held in place by a bi-directional energy vortex between the two bodies. This system is both strong and sensitive. Changes in planetary conditions—such as shifts in water viscosity due to oil pollution—can disrupt the balance, forcing the system to compensate and triggering catastrophic effects.

Since gravity interacts with every single system, whether it's a plant, a tree, a human being, or an animal, once we learn to work with gravity and pressure — rather than against them — we gain direct influence over resilience, health, and vitality at every level of life.

## Anti-gravity

Mainstream science mistakenly ties gravity to mass. This error has led to elaborate theories of dark matter and dark energy, invented to explain discrepancies between observed movement of celestial bodies and mathematical predictions. But in the magnetic model, these discrepancies vanish.

Movement is explained by resonance, vortices, and energy flows. There is no need to invent unseen matter to account for what is already evident in the magnetic framework.

Controlling gravity has profound applications. Artificial gravity fields can be generated through pulsed magnetic technology. This allows for inertia dampening in vehicles, weightless or high-gravity environments for manufacturing, and safer transportation. Such technology has been secretly studied and, in some cases, already implemented in hidden facilities. It also explains UFO phenomena—craft moving effortlessly through gravity fields, powered by magnetic energy, without rockets or combustion.

The truth about gravity has been deliberately hidden to maintain control over humanity. By making gravity appear as an immutable force tied to mass, science and industry have kept people economically enslaved to fossil fuels and rockets. Once magnetic principles are embraced openly, humanity will recognize gravity as simply compressed magnetism—completely manageable through resonance.

Levitation, once dismissed as myth, becomes a natural process of tuning into magnetic resonance. With mastery of this knowledge, we are no longer bound by false science or artificial limitations. We step into a universe of freedom.

## Barometric pressure

Barometric pressure works a little differently. It's about the relationship between the ionosphere, an upper energy rim, and a lower energy rim inside the Earth. Those communicate with each other in a flow of energy.

Now, in this model, gravity and barometric pressure are treated like separate circuits. They're not the same mechanism. They take different pulse rates to modify.

Tesla used to talk about opposing polarities, and in this model, that holds true. There is a constant exchange going on. But here's the tricky part—barometric pressure varies from moment to moment all over the planet. So magnetic devices don't lock onto just one specific pulse rate. They tune into what's needed for that region, at that time.

Now, top-secret satellites are already doing this. They'll just blitz the area with a wide band of pulse rates. That way, no matter what the natural setting is, they "capture" the range and can force a shift in pressure. That's how they can seed a low-pressure system or a high-pressure system—kickstarting hurricanes, tornadoes, or other extreme weather events.

Essentially, they're using magnetic vortices to manipulate barometric pressure, and from there, they can control weather.

### Anti-Gravity & Barometric Pressure Modification

Both anti-gravity and barometric pressure modification have been researched and experimented with for decades.

It's important to understand that anti-gravity and barometric pressure are fundamental to magnetic technology—and to the magnetic units I talk about. Essentially, in every unit we are modifying gravity to some degree, and barometric pressure to some degree.

So yes—anti-gravity and barometric pressure are separate circuits. Modifying one doesn't necessarily mean you're modifying the other. But they do coexist in the same system.

There's some overlap, of course, but in general, they operate independently without interfering with one another.

And this is key: even within the gravity field itself, you get slight variations across different regions of the world. And when you go beyond Earth—onto other planets—you'll find different pulse rates for each circuit.

That's the nature of the system.

### Space travel

Magnetic energy technology is not only related to space travel — it's *perfect* for it. And this is a lot less hypothetical than you might imagine. That's all I'll say for now.

So, let's look at how space travel transforms in this model:

Forget about gravity restrictions to get ships out of orbit.

Think about **pulsing magnetic fields that cancel gravity**.

Forget about expendable fuels.

Think about etheric magnetic power — endless, clean, with no exhaust.

Forget about conventional propulsion.

Think about **magnetic energy encapsulation** that attracts the entire vehicle directly to its destination.

Forget about light speed restrictions.

Think about **hyper-dimensional pulsing magnetic fields** moving at nearly infinite velocity.

Forget about the dangers of collision with interstellar objects.

Think about **impenetrable magnetic force fields** combined with higher-dimensional travel, where obstacles simply don't exist.

Forget about extended trips requiring suspended animation.

Think about **neutral magnetic streams throughout space** — natural wormhole-like flows beyond space and time.

Forget about the difficulties of navigating to distant star systems.

Think about **real-time etheric magnetic navigation** that locks onto magnetic signatures of any system and draws the ship straight there.

Forget about long-distance communication delays.

Think about **quantum-entangled magnetic communication** — real-time, across any distance.

Forget about artificial gravity induced by motion.

Think about **magnetic pulsing gravity fields** onboard that perfectly mirror Earth's resonance and strength.

Forget about limited supplies.

Think about **never-ending magnetic food and material generators** that also provide fresh air and water.

Forget about radiation exposure.

Think about **fully shielded magnetic energy fields** that keep both the crew and onboard greenhouses perfectly safe.

Forget about size and payload restrictions.

Think about **new materials fused with etheric magnetic fields** to create massive, resilient ships.

And finally — forget about wondering if we're alone in the universe.

Think about **joining our galactic community and beyond**, fully integrated with ascension and magnetic technology.

## **Interstellar**

Yes, the New Human Being will also be a galactic being. With magnetic energy enabling interstellar travel and interdimensional connection, humanity will join the larger community of civilizations. We will no longer be isolated but will take our place among others who live in resonance. This expansion will bring new responsibilities, as humanity learns to interact with beings across the cosmos in love and respect.

At its core, this is a quantum-to-macro transformation. It touches every level of our existence. And as we move into this new spectrum, it paves the way for interdimensional and interstellar communication.

This is the entry point into the galactic community. For thousands of years, humanity has lived in isolation, bound by scarcity and dissonance. That isolation is ending. The Age of Magnetic Energy is the bridge — linking humanity with higher beings and with civilizations beyond Earth. Humanity will finally acknowledge that we are not alone, but part of a vast galactic community.

### **Floating Cities**

This is a futuristic discussion about what can and will happen with magnetic technology in the years ahead — maybe sooner than we think.

If you're here now, choosing to live through your heart center and embrace higher consciousness, chances are you'll experience this kind of world. Even if not in this life, you'll return in another — with higher awareness, better bodies, and a far better reality on this planet.

### **The Rise of Floating Cities**

Now imagine this:

- A 50-mile-wide circle on the planet, marked by five-mile-high towers.
- These towers emit fields that create a zero-gravity zone within that circle.
- Inside, a vast disc-shaped foundation forms — perhaps 20 miles in diameter, 500–1,000 feet thick, made of advanced crystalline and geometric materials. This disc becomes the base of a floating city. It continuously channels magnetic energy, sustains zero gravity, and is enveloped in protective force fields. From its underside, crystal structures grow, supplying unlimited power. On its surface, a blank canvas awaits — ready for a city designed entirely with magnetic technology.

These cities are:

- Self-sustaining — with unlimited power, food, water, and materials.
- Constructed with sacred geometry — enhancing life and flowing with etheric energy.
- Completely pollution-free — no moving parts, no engines, no emissions. They can hover at any altitude — above the weather systems, even out into space — and move freely across the globe.

### **Life in Floating Cities**

From these cities, people can:

- Travel by private ships to visit Earth for hiking, exploration, or caretaking — always leaving a zero footprint.
- View the planet as a sanctuary rather than a resource.
- Live in harmony, while enjoying everything they need within the floating cities themselves.

The technology also allows these cities to bend and diffract light. That means a city could hover above the planet without casting a shadow — even appearing invisible to anyone on the ground.

## Beyond Earth

These cities aren't just for Earth. With modifications, they could travel to other worlds. Their protective magnetic fields make them essentially indestructible, opening the door to deeper cosmic exploration.

As humanity reaches higher levels of consciousness, we won't just be caretakers of Earth. We'll become valuable members of a galactic community, building floating cities and space stations that expand far beyond this planet.

Floating cities represent more than just technology — they embody a new way of living: heart-centered, sustainable, and aligned with universal harmony. And whether in this life or the next, they'll be part of our reality.

## Aliens

### Do Aliens Depend on Electricity?

Electricity forces electron flow through conductors, creating heat, loss, and dissonance. It disrupts resonance fields, drains the ozone layer, and destabilizes the ionosphere. Any civilization that depends on electricity cannot maintain harmony with its planet for long. For advanced beings, electricity is considered primitive, inefficient, and destructive. It is a technology that limits consciousness and damages planetary systems. This is why higher civilizations abandoned it long ago.

Instead, advanced beings use magnetic energy. Magnetic systems operate through resonance and neutrality. They draw power only when needed, without forcing dissonance into the environment. This allows for limitless, clean energy that enhances natural systems rather than breaking them down. It is the universal standard of advanced civilizations.

Aliens do not need wires, grids, or nuclear plants. Their craft, homes, and cities are powered by resonance fields. Transportation systems bypass gravity entirely, using magnetic compression. Healing technologies tune directly into cellular resonance. Communication flows interdimensionally, without devices, through vibratory alignment. These advances are possible because they are not trapped in the destructive cycle of electricity.

Humanity, on the other hand, was deliberately trapped in electricity. Knowledge of magnetism was suppressed, while industries built massive infrastructures of wires, grids, and fossil fuels. This created scarcity, conflict, and dependence. It also ensured that humanity would remain in a lower cycle of consciousness, unable to join the wider galactic family.

The transition we are now entering changes that.

Electricity was a stepping stone for humanity, but it has reached its end. The future—our future—is magnetic energy.

### **How Can We Detect the Aliens?**

If we want to detect other civilizations, we've got to think about how they operate. They're using etheric magnetic energy. They've moved beyond electricity and the barbaric limitations of our current science. They're not relying on radio signals or clunky electronics. They're working with natural etheric systems.

That means if we want to find them, we have to shift from passive technology to active technology. Forget telescopes just passively gathering light or dishes catching signals from the electromagnetic spectrum. We need to actively generate signals that quantumly entangle with theirs. We have to stop relying on concave satellite dish technology and move toward convex designs. Convex technology emits and attracts signals across a much wider scope—it's going to dominate our future search for extraterrestrial life.

And forget electronics altogether. They're too limited, too slow, too crude. What we need is etheric magnetic technology—interdimensional, faster than light, capable of entangling with their systems directly. This is about moving from reception to attraction. We must actively attract their signals beyond space and time.

That requires special alloys—NASA and other labs have experimented with them in secret. These alloys can quantumly entangle with etheric magnetic signaling. Imagine a convex dish, or a pin grid array, made of a hyperdimensional quasi-crystal alloy. It doesn't just pick up a signal—it entangles with it, drawing it in from across space-time. With this, we could detect life on distant worlds down to the cellular level. Structures, atmospheres, even if they've gone fully natural—still detectable.

Now here's the catch. Consciousness has to be combined with the technology. As soon as you detect them, they'll know. Their consciousness will immediately interact with yours. That means our level of awareness has to rise—we need at least a small leap in consciousness, some degree of ascension, so that our minds can interface with the tech.

We also have to abandon the Einsteinian paradigm—the obsession with space and time that locks us into false limitations. Space and time are not barriers. Etheric magnetic technology operates beyond

them. With it, we can know the true current positions of stars and systems—not ancient starlight, not guesses, but where things actually are right now. That allows us not only to analyze those systems accurately, but to quantumly entangle with them for travel.

And here's another point: safe travel requires a kind of invitation. The beings of those systems—whether they're brothers, sisters, or whatever we want to call them—must align with us. Consciousness plus technology, working together, is what ensures we can travel beyond space and time without danger.

So yes, this sounds like a rant, but it's a roadmap. Detecting alien life won't happen with telescopes, radio waves, or signals. It'll happen with etheric magnetic technology, convex attractors, and consciousness itself as part of the system. That's the only way forward.

There are people who need to hear this, and the more it spreads into conventional science—universities, labs, and beyond—the faster we move toward bringing it into the open.

## Part 13: Metaphysical Downloads

It's strange, I know, to weave these metaphysical themes into a channel about magnetic energy. But really, they're not separate. This is the union of science and spirituality — unconditional love expressed through technology and consciousness.

Now, let me be clear — this is not based on conventional mathematics, formulas, or dimensional theories taught in universities. What I'm sharing comes from the teachings we were given about how the universe functions and the role dimensions play in it.

### Universal Dimensions

Each dimension has its own range of resonant magnetic pulse rates. Each one has the ability to expand or compress space, time, or event sequencing. And each one can contain essentially infinite enumerations of information or realities.

There are also distinct barriers — dimensional membranes, if you will — that make each layer unique.

In this model, there are **12 dimensions**. I'll give you a basic outline of each. Think of the universe itself as a giant torus, and each dimension as a counter-rotating torus that overlaps and interpenetrates the others.

### The Higher Dimensions

#### 12th Dimension — The Universal Mind

This is pure, neutral, white light energy. This is where all energy encoding begins. Every particle, every structure carries encoded energy, and that encoding originates here. You can imagine it as a cosmic neural network stretching endlessly, filled with event lines and scripts being written for how reality will play out.

It doesn't recognize polarized emotions at all — not anger, fear, lust, or even excessive joy. To enter, you need to let go of all emotional baggage. Once there, the experience is beyond emotion — it's unity, elation in the purest sense, and oneness with everything. It's an incredible place to visit in meditation or astral projection — you can literally "see" the storylines of existence being formed.

#### 11th Dimension — Energy Transmutation

This is a kind of void. Massive vortices flow from the 12th down into the 11th, where pure thought energy begins to transmute into something more tangible — something that's on the way to crystallization.

#### 10th Dimension — Template Seeding

Here is where the templates of everything physical are first seeded. These structures are dynamic, constantly forming and reforming, and serve as the blueprints of matter and experience.

### **9th Dimension — Realm Formulation**

Realms are formulated here, and there can be an infinite number of them. These are like environments or canvases that other dimensions then use as foundations. If you explore astrally, you'll find endless realms, each distinct and intricate.

### **8th Dimension — Light and Sound Crystallization, Life Incubation**

This is where light and sound begin to crystallize into navigable structures and technologies. It's also where etheric life begins — eternal, energetic life, not yet physical.

### **7th Dimension — Light Being Infrastructure**

By the seventh dimension, you're entering the realm of serious discussions with higher beings of light. Here lies the infrastructure of the universe itself — the councils, the guides, the "light courts." But again, you won't even get in if you're holding onto heavy emotions. This dimension requires clarity, neutrality, and openness.

You can bring questions about life, purpose, or the universe itself. This is where logistics are handled, where roles and paths are managed, and where you might encounter beings who tell you, "That question is above this level, you'll need to go higher."

### **6th Dimension — Script and Template Completion**

In this realm, the scripts and templates for life and events are solidified. It's like backstage before the play begins — everything is finalized, roles are assigned, and scripts are ready to manifest.

## **Mid Dimensions**

### **5th Dimension — Heaven**

The fifth dimension is what many traditions call "heaven." It's where souls go between incarnations, where you reconnect with family, ancestors, angels, and guides. Here you'll find beings of light, ancestral connections, angelic presences, and a far less polarized environment. To enter, your vibration has to be clear and high. Anger, fear, or negativity simply don't cross the threshold. It feels very much like a crystallized version of physical reality — vibrant, creative, full of endless experiences.

### **4th Dimension — Elemental Structures and Natural Forces**

Here, elemental energy begins coalescing. Structures of nature — gravity, elemental forces, energetic frameworks — are put into place, preparing the stage for physical manifestation. The fourth dimension is mostly technical — interesting mainly because you can see how things are being set up for manifestation in the third.

### **3rd Dimension — Physical Reality**

This is our world: the elements fully manifest, the forces of nature active, and all scripts playing out. Everything we experience in matter is the crystallized expression of higher-dimensional processes.

If you're astral projecting or exploring realms, you can carry all kinds of emotions and energies with you — light or dark. That means experiences here can be very polarized, sometimes adventurous, sometimes strange, and sometimes downright intense.

Because of that, shielding yourself in light and love is essential. Always use your heart center as your guide.

## The Lower Dimensions

### 2nd Dimension — Redistribution Zone

This is a void of immense pressure and vortices. It's where the energy of all that's completed in the third dimension is redistributed and neutralized — compressed back into pure light. Think of it as the other side of black holes, a zone where everything is broken down and purified.

### 1st Dimension — Source Light

Pure, neutral, high-energy light. This is the source. From here, energy feeds back into the 12th dimension, completing the cycle.

## How It All Works

Energy primarily funnels downward through the dimensions, but there are feedback loops upward as well. These loops allow communication and adjustment between layers, ensuring the system runs at **100% efficiency** at all times — no matter what.

Even if cataclysms occur in our world, even if pollution or radiation create blockages, the universal system *will* balance itself. That's one of the concerns right now: Earth's pollution and distortions are creating problems, but the system always finds a way to maintain equilibrium — sometimes forcefully.

And of course, beyond our universe, there are infinite others — each with their own structures, their own number of dimensions, and their own mysteries.

If you want to explore these yourself, meditation and astral projection can take you there. The 5th dimension is a favorite, the 12th is profound, and if you want to debate or argue with light beings about your path, the 7th is the place to go.

So that's just a basic overview of the universal dimensions.

## Dimensions vs. Realms

From a technical standpoint, dimensions are defined by ranges of magnetic resonant frequencies. Realms exist within those ranges. Practically speaking, you can tell them apart by the consistency of their characteristics. Each dimension has a certain "feel" to it, while realms within that dimension can vary widely.

It's important to note that "lower" doesn't mean worse. That's just our human way of labeling things.

The **second dimension** is mechanical in nature, focused on the processing and redistribution of energy. It's not "hell" — it's simply part of the universal workings.

The **first dimension** is pure source light. Everything here is converted back into neutral white light before feeding back into the twelfth dimension. Encounters here are usually with beings of immense energy who are busy maintaining the functioning of the universe. It's not a place for long chats — more like witnessing the powerhouse of creation.

### What to Expect Where

- **1st & 2nd Dimensions** – More mechanical or functional; vital to the universal system.
- **3rd Dimension** – Adventure, polarity, shielding required.
- **5th Dimension** – Great for healing, reunion, exploration, and joy.
- **7th Dimension** – Best for serious discussions with higher beings.
- **12th Dimension** – Observation, communion, and profound mind-expansion.

In the higher dimensions, dark or negative beings simply cannot enter. The dimensional barriers prevent it. These spaces are filled only with high vibration and light.

### Who Is In Control?

If you look at society from the most limited perspective, you might say: governments are in control, militaries are in control, world leaders are in control. Some would argue it's the secret government, the shadow government, or hidden elites.

But when you expand the lens interdimensionally—when you consider the universal consciousness, the universal mind, and the event lines that all beings are connected to—it becomes clear: they're not truly in control.

### The Universal Mind

Every decision, whether made by an individual or a world leader, is inseparable from the universal mind. No decision happens in isolation.

If someone—be it a politician, a scientist, or a general—makes a decision inconsistent with the event lines of the universal mind, corrective action is immediately invoked. Beings of light and love, interdimensional in nature, have both the authority and power to carry out those corrections. They are fully authorized to enforce the directives of the universal mind.

So, are they "in charge"? Only insofar as they are fulfilling their roles. They maintain control to the degree that they are carrying out the balance of the system.

## Incarnation as Energy Packages

Our incarnations are perceived by the soul as single energy packages—like one day in the awareness of our higher self. All the pain, joy, and experiences are bundled into that snapshot. Over countless incarnations, these packages contribute to soul evolution.

This perspective helps explain why pain often lingers throughout a lifetime: to the soul, it is one continuous packet of experience.

Ultimately, everything is in control—all beings, all energies, all species. Even animals and insects are part of this universal orchestration. For all we know, some seemingly insignificant insect species could hold a unique place in the universe—so unique that it plays a role in why humanity will survive coming cataclysms.

We are deeply tied into a vast, interconnected network. And from that perspective, the answer to “who’s in control?” is: all of us, together, through the universal mind.

That’s the message to hold onto. Beyond space and time, we are infinitely powerful, co-creating reality with the universal mind.

## Love

Quick disclaimer—love can sound a little New Agey, maybe even preachy. But honestly, this might be the most important point in the book. Because if we don’t have a heart-based, love-centered future, then magnetic energy technology is not something we would want unleashed on this planet.

Spiritually, the New Human Being will embody unconditional love. This is not a vague concept but a lived reality. Every action will be measured against what supports life, harmony, and resonance. Love will expand beyond family or nation into something universal.

Love is not a side theme of Ascension—it is its very core. As resonance rises, love becomes the organizing principle of life, transforming not only relationships but entire societies.

## Love in Times of Upheaval

During Earth changes, love will serve as the anchor. Fear may rise, but love will provide stability. Communities that live in love will weather upheaval with grace, helping each other and trusting in the larger orchestration. Love will be the survival tool of the new age, more powerful than any material preparation.

Living in love means living in resonance. It means seeing beyond self-interest into the interconnectedness of all. As Ascension unfolds, humanity will finally embrace this truth. Love will no longer be an ideal to strive for but the natural state of existence.

In upheaval, love is tested. When disasters strike, when systems collapse, when survival seems uncertain, fear often rises to the surface. But it is precisely in these moments that love reveals its true power. Love is not fragile—it is resilient. It expands in adversity, guiding humanity through chaos into unity.

In every transition, love is the bridge. It carries us from the dissonance of the old world into the harmony of the new. It transforms fear into trust, chaos into order, and survival into thriving. Love in transition is not only possible—it is inevitable.

We may be entering a period of significant Earth changes, and one of the most important things we can do is learn to stay in the heart space through it all.

If we remain in the head—in ego, fear, or polarization—we can quickly drop into survival mode, fight-or-flight responses, or panic. Practicing now to bring our focus and energy into the heart will be key to navigating whatever is coming.

When you connect through the heart to the universal mind, you begin to sense the energy behind the changes themselves.

- Religious interpretations, conspiracies, or fearful stories may swirl all around, but when you put those into the heart, they usually dissolve.
- That's because behind Earth changes are universal processes. They're not random; they're part of cycles that are both destructive and creative at once.

Think of the archetype of the dark mother—the goddess who destroys and creates. Destruction and creation are not opposites; they're inseparable parts of the same process. Life and death are equally necessary, and both are held within an ultimately loving presence.

When you tune into the heart, you connect with that presence and see the love underlying even the cycles of upheaval.

### **Finding Peace in the Process**

Does that make pain and loss disappear? Probably not in our everyday human experience. But from the higher perspective of the heart, you see:

- The role of souls and spirit selves involved in Earth changes
- The continuation of life beyond physical loss
- The greater purpose in what's unfolding

This perspective brings peace, and with peace comes clarity.

### Guidance from the Heart

Practical guidance also arises through the heart. Decisions made from panic or ego can place us outside what we've already agreed to at a soul level.

Heart guidance, however, tells us:

- When and if to prepare
- Whether to move or stay put
- How to help others
- Or sometimes, to simply do nothing

It is not about fear-driven action. It is about aligning with divine timing and wisdom.

### The Collective Heart

As more people begin to live from the heart, we will naturally connect into a global consciousness network.

- This shared heart resonance will help humanity make collective decisions.
- It will guide us not only in surviving Earth changes but also in rebuilding and understanding their deeper purpose.
- Through the heart we also connect with interdimensional beings, guides, and angelic presences, who can give precise wisdom about timing, preparation, and action.

Tuning into the heart changes how we interact with whatever unfolds. It helps us recognize Earth changes as part of a divine process—a cycle meant for transformation, healing, and ultimately the upliftment of humanity and the planet.

So keep practicing. Stay in the heart. Surround the world with love, raise vibration where you can, and let universal consciousness guide you.

### Love in Everyday Living

This is about love in everyday life—how to actually live in your heart space while moving through daily routines. Most people want to know: is there a formula for staying in the heart? Honestly, no. But there are tools that help. Our culture constantly demands that we live in the head: polarized, reactive, full of anger, fear, judgment, and distraction. So how do you shift into the heart in an environment designed to keep you out of it?

The first step is willingness to simplify.

- Simplify what you consume.
- Simplify what you react to.
- Simplify what you carry around.

The heart will almost always tell you: “Let it go. That news article? Let it go. That social media post? Forget it.”

That willingness to simplify is the biggest challenge—but also the gateway.

## Death

Death is often misunderstood—especially on a planet like ours, where the vibration has been at the very low end of a cycle. In such conditions, perspectives on death tend to be narrow, even fearful. From a magnetic energy perspective, though, it’s quite different.

Everything in our physical world needs an energetic counterpart. There is always an **etheric exchange** happening between the physical and the non-physical, and that’s what sustains our existence.

For humans, the **physical body** is connected to an **energy body**. When the physical body dies, the energy body continues on—it doesn’t disappear. In fact, it can go through countless incarnations.

But here’s the key: even the energy body isn’t the *real* you. It’s more like a mechanism, a tool. The real you exists at a much higher vibratory level, timeless and outside of this physical framework. The energy body serves as a bridge, connecting that higher self to each incarnation.

Our incarnations are complex. The physical body is deeply tied to the vibratory rate of the planet. Left on its own, it behaves a bit like an animal—reacting in fear, anger, or violence, echoing the planet’s vibration.

But when higher consciousness steps in—through meditation, love, joy, or awareness—the physical body can temporarily express a higher vibration. The challenge is consistency. Without continuous effort, we tend to fall back into alignment with the planet’s lower resonance.

The true self—the higher being—exists outside of time. From that level, incarnations don’t have to be sequential. They can be simultaneous.

This means the real you could have multiple incarnations happening at once—different genders, races, roles, even people in conflict with one another. Each incarnation feels like it is the only “you,” because its vibratory signature is distinct. That separation is necessary. If you were to feel every emotion, joy, or trauma from all your lives at once, it would be overwhelming.

Sometimes, when that separation thins too much, it can lead to confusion or even mental imbalance—because too many incarnations are bleeding into one another.

Here's the profound part: you could be fighting against someone who is also *you*. The enemy across from you may simply be another incarnation of your own higher self.

As consciousness rises on this planet, more people will begin to sense this interconnectedness. And when that realization spreads, it naturally motivates peace. You begin to ask: *Why would I harm someone who is, in truth, part of me?*

Energy bodies can span thousands of years of incarnations, carrying subtle resonant signatures—memories, experiences, even wounds. One lifetime might carry the echoes of another, playing out roles from multiple perspectives.

As awareness grows, people will be able to heal not only their present lives, but also past and future lives linked through the same energy body. And when you do healing work for yourself, the ripple effect extends outward—to other incarnations, and even to others you're connected to.

This creates a multiplier of healing, radiating in all directions. That's one of the most powerful aspects of raising consciousness: the healing doesn't just stay with you. It spreads.

At the heart of all this is **love**. Love is the vibratory rate that opens the door to expanded awareness. Love heals across incarnations, across lifetimes, and across the countless expressions of who we really are.

As we transition from a low state of consciousness into a higher one, we're stepping into a truly extraordinary experience—an awareness of our vast interconnectedness, and the power of love to carry us through it.

## Part 14: Ascension Preparation

### How to Prepare for Ascension

This topic focuses on practical guidance for surviving the Ascension process. The changes ahead will be immense, but survival is possible for those who align with resonance and prepare in both spirit and action.

Survival is not just about clinging to life. It is about aligning with the purpose of Ascension. Those who resist will suffer needlessly, while those who flow with the transformation will discover liberation. Survival is not simply enduring—it is evolving.

Preparation is less about physical stockpiling and more about consciousness. Yes, practical readiness has value, but the most important preparation is releasing fear and aligning with resonance. Those who live from the heart will navigate the transition with clarity. The key is openness to guidance and trust in the process.

Yes, the collapse of money sounds frightening. People ask: What about my savings, my retirement, my investments? While I can't legally give financial advice, I can say this:

Communities that support each other will thrive more than isolated individuals. Building connections, sharing resources, and creating networks of care are essential steps. While stockpiling food and water may offer short-term security, true survival lies in cooperation and resonance-based living.

Think about survival tools and resources that matter in transition:

- Heirloom seeds (not hybrid or GMO) so food can be grown year after year. Pay attention to what you eat. Avoid GMOs and chemical-laden foods as much as possible. Natural, resonant food strengthens the body and prepares it for higher frequencies. Water, too, can be magnetically tuned to enhance vitality. These simple choices align you with the frequency of survival.
- Water filtration systems to ensure clean water.
- Low-voltage solar or simple sustainable tech to get through the gap until magnetic technology fully emerges. Dissonant systems like conventional electricity will collapse. Learning to use and trust magnetic energy is essential. Seek out knowledge, share it, and be open to adopting new systems as they emerge. Magnetic energy is not just survival technology—it is the foundation of the new age.

Once it arrives, magnetic energy can spread globally in months, but until then, resilience is key.

Living in resonance is the key to survival. This means embracing harmony in every aspect of life—relationships, food, technology, and thought. Choose what aligns with love and vitality. Release what

creates dissonance. When you live in resonance, you naturally move with the flow of Ascension instead of resisting it.

Some will resist, clinging to control and greed. But resistance will not last. The vibration will ripple across humanity until it reaches a breaking point: ascend or die. Those unwilling to expand will leave their incarnation. Those open to resonance will rise.

There may also be resistance from those who fear losing control, since higher-dimensional awareness dissolves the old systems of power. But these higher frequencies cannot be held back forever.

### **Mindset**

The most important step is mindset. Fear will not serve you. Fear locks consciousness into dissonance, making the transition more difficult. Letting go of fear and embracing trust allows guidance to flow. The universe is orchestrating this shift with precision. Trusting that orchestration is essential.

On a personal level, the collapse of old systems will push people to look beyond survival, discovering inner strength and the reality of consciousness. It will feel like a life review while still alive—an expanded awareness of one's experiences, joys, and pain.

These times call for unity. With economies faltering and Earth changes increasing, it's vital that people come together, forgive, support one another, and practice unconditional love.

Meditation, prayer, dreams, and intuition will become increasingly important. Guidance will come through profound insights and overwhelming inner knowing. Tools like lucid dreaming and meditative practices can help us align with what we need to do.

Help raise the vibration on this planet. Do your part to clear the negative energy and strengthen the light. That's how we transition into a new world—one where freedom, creativity, and love are the true economy.

### **Lightworkers**

One strong message we've been given is that some humans across the globe will act as conduits for the new, higher vibration of energy.

People sometimes call them lightworkers — those more in touch with oneness, heartfelt guidance, or a higher resonance. If you're reading this, chances are you either already are one, or you're about to step into that role.

But let me be clear: this isn't a burden. It's not "if you don't do this, ascension won't happen." It's simply: if you feel called, then by being yourself and doing the work, you naturally raise not only your own resonance, but the resonance of those around you.

Spiritual preparation cannot be overlooked. Meditation, heart-centered living, and openness to guidance will provide clarity during chaotic times. When disasters strike, those who remain centered in love will know what to do. Guidance is always available to those who listen with the heart.

### **Living in Heart Space**

As the Earth shifts, its vibrational resonance is rising, and that rise is becoming more consistent across the planet. Inside us, we have energy centers that respond to this. Two in particular stand out: the thought energy field in the head and the heart energy center.

The heart is unique. It attracts only high-vibratory energy. Its field expands outward into infinity, naturally attuned to universal communication, intuition, and higher consciousness. In a sense, it's already wired for the new energy that is unfolding on this planet.

The heart chakra connects us to super-consciousness—to the soul level, the level that senses interconnection with all life. This energy is relatively neutral. It doesn't polarize. Instead, it opens, accepts, and connects. When we let the heart center guide us, we move in balance.

Our thought energy, by contrast, can be all over the place. One moment we're inspired, the next moment we're caught in a low vibration. But as Earth's resonance rises, the heart aligns more and more with that higher vibration—and less with the lower.

Right now, we live in a society of polarizations. Politics, religion, science, everyday life—it's extremes colliding. And those polarizations come from the cognitive space, the head. They're restrictive.

The source of information is just as important as the information itself. When we come from the heart space—when we surrender and allow it to guide how we communicate, how we judge, how we create—we step outside of those polarizations.

### **Finding Our True Calling**

As resonance rises, awareness expands. We perceive our connection to the universal mind more vividly, and realize that control is co-created. It's not that we suddenly "gain" control—it's that we become aware of our true nature: extensions of the universal mind, infinitely powerful, and one with it.

The heart draws in tremendous amounts of universal energy. As we synchronize our thought fields with that heart energy, something remarkable happens: our expanded consciousness tunes into our true calling. We begin to sense the paths we chose for ourselves at a much higher level of awareness.

When we act from the heart space, the universe itself flows through us. Our creations ripple throughout time, space, and dimensions—far beyond anything the mind alone can do. They contribute

to the universal tapestry. Why is that important? Because it's going to affect every area of life on this planet—our relationships, our work, our communities, our societies.

### **Heart as the Barometer for Our Choices**

The heart center is our portal—our connection, our gateway to universal consciousness. We're not separate from it. We're already woven into the universal mind, the universal heart, the universal love. It's who we are. Everything happens simultaneously between us and that universal consciousness.

At this level of consciousness, love is more about letting go—recognizing what's beyond your control and not carrying it. What is in your control is exactly what you bring into the heart energy center. Discuss it there, and you'll get clarity on whether action is needed—or not.

The heart isn't there to serve your ego. It won't hand you revelations on demand. You can't control it. What it will do is give you what you truly need—knowledge, skills, understanding—but only if you completely surrender to it.

The more you "try," the more you block yourself. The more you surrender to the heart process, the easier it becomes. As vibration on the planet rises, living from the heart will eventually guide everything we do throughout the day.

When we speak, think, or act in ways that carry a low vibration—being critical, arguing online, spreading negativity, or exposing ourselves to low-vibration environments like violent media—the heart reacts.

At first, you might notice a subtle ache or tightness, sometimes instantly, sometimes hours later. That's your heart center signaling that the energy you engaged in is out of sync with its resonance. The more the planetary vibration rises, the faster and stronger that feedback will become.

The heart is becoming a barometer for our choices. It tells us when something resonates with truth, and it warns us when something does not.

Stay simple. Stay grounded. Keep returning to the heart. How you survive Ascension depends less on what you store in your home and more on what you cultivate in your heart. Love, trust, and resonance are the true tools of survival. With them, the transition becomes not a struggle, but a doorway to a higher existence.

### **The Future of Humanity**

This is the future of humanity: heart-centered creation. Heart-centered technology. Heart-centered evolution.

As more people connect with their hearts, polarization loses its grip. That endless back-and-forth cycle of opposing forces weakens. Instead, we exude balance directly into the world.

And when groups of people synchronize at the heart level—when subatomic core structures and magnetic pulse rates align across individuals—that's when extraordinary things happen. Creativity flourishes. Love becomes visible. New forms of technology emerge.

Imagine that multiplied across humanity. That is where we're heading.

## Part 15: Ascension Practices

Our heart energy centers vibrate at such a high frequency of love, such a high resonant frequency, that it's hard for some people to connect their consciousness to it.

Now, there are a million ways to raise your vibration—sound healing bowls, frequency videos, all kinds of technology and substances. But if you want to try it on your own, without tech or drugs, the first thing you've got to do—and I've said this many times—is clear the energy field around your head.

Why? Because your head space affects consciousness more than you realize. Any polarity—worry, fear, anger, all that low-vibration stuff—immediately creates blockages.

Because everything is energy, whatever you consume gets lodged in your system. Polarizing content creates low-vibration blockages in the brain and energy body.

To counter this, try these:

### 1. Pressure Breathing

- Breathe deeply, but instead of simply exhaling, purse your lips and control the out-breath.
- Visualize white light building pressure and pushing out stagnant energy.
- Done regularly, you'll feel energy actually moving and clearing.

### 2. White Light Circular Breathing

- Inhale and visualize white light rising up the back of your body.
- Exhale and let it cascade down the front, culminating in the heart.
- This trains awareness to return to the heart, while flushing low-vibration energy out.

## Getting Into Being

Once you've done that, it's about moving into the space of being. The heart energy is neutral, unconditional love. To match it, you have to let go—really let go.

To put it bluntly: stop giving a damn. About politics, about economics, about life and death. You just have to drop it all.

And here's the key—you're already one with the universe, already connected to the Divine mind, already connected to your heart energy center. Nothing can break that link. Even after you leave this incarnation, you're still tied to it.

The problem isn't the connection—it's our perception. And perception is an illusion. If focusing is tough, place your hands over your heart. Tap gently. Use a tuning fork or scalar coil tuned to heart chakra frequencies if you want. Or keep it natural—just hands, touch, intention.

All of it entrains your consciousness to the heart center.

So that's the process—breath, relaxation, energy movement, letting go, and surrendering into the heart. Practice it, persist, but don't force it.

### **Staying Grounded**

Grounding helps you stay anchored while living in the heart.

- Connect your bare feet to the earth when possible.
- Drink lots of water.
- Use running water on your hands.
- Touch natural elements — trees, rocks, plants.

Grounding stabilizes your energy so heart focus is easier.

### **Dealing with Doubt and Monkey Mind**

If you doubt yourself, that doubt itself will knock you out of the heart space. But remember—you can't be disconnected. You're already plugged into the universal mind. Take that as a given.

Now, if your mind won't stop racing, you probably haven't cleared your head energy enough. Go back to breathwork, relaxation, and moving energy until the loops loosen.

And if you still can't quiet the monkey mind, bring the conversation into your heart. Literally speak your worries, fears, or doubts to your heart energy center. That shifts your conscious focus there and trains your brain to recognize the heart as home base.

### **Tap Into the Heart Center**

Think of the chakras as step-down transformers. They take high, neutral etheric energy and translate it into expressions of our physical and energetic bodies. Each chakra has unique subatomic configurations that give it its purpose, its role in awareness and expression.

As we tune into these centers, we'll learn to heal ourselves, expand our awareness, communicate at deeper levels, and connect with each other in ways that are revolutionary. This opens us not only to one another but to our brothers and sisters across the universe—beings who already live from this heart-centered space.

From a magnetic energy point of view, the heart center is the strongest energy field in the body. It's directly connected to the universe.

So if, in your meditation, guidance arises from your heart—something new you've never visualized or considered before—that takes precedence over any technique. Because that's not just imagination. That's a connection to universal consciousness—your higher self, divine guidance, your soul. And that deserves your trust.

Imagine a physicist pondering an old model or theory. If, while holding that thought, their chest feels heavy, blocked, or tight, it's an energetic sign that something isn't fully accurate. On the other hand, when a concept resonates with truth, the heart feels expansive, light, and flowing. That is going to become one of the most important guiding principles—not only in science and engineering, but in every field of human life.

Our heads can spin endless stories. But the heart doesn't lie. It instantly discerns what's in alignment.

### **Practicing Heart Guidance**

So how do we work with this? It begins with practice. Whatever thought, idea, or technology you're considering—run it through your heart.

Does your heart feel open and expansive when you hold that concept? Or does it tighten and feel restricted? That's your measure. That's the feedback loop.

The more you clear your heart energy—through meditation, visualization, and conscious awareness—the stronger that guidance becomes.

As we step further into this rising vibration, scientists, engineers, artists—really, all of us—will need to create from the heart. That's where sustainable technology, authentic relationships, and true evolution emerge from.

This isn't just poetic—it's practical. Our future depends on it.

So, tune into your heart. Let it be your compass, your filter, your barometer of truth. The heart is already ready for the transition. All we have to do is center in it and follow where it leads.

The heart energy center is the key to the future. Without love guiding our technology, magnetic energy would be dangerous. With love at the center, it becomes the foundation of a golden age.

### **Using the Heart for Daily Challenges**

Bring situations directly into your heart's holographic field.

- A conflict at work

- A stressful problem
- Even a global crisis

Just drop it into the heart field and let it sit. Answers will often come spontaneously—sometimes immediately. Over time, the heart delivers infinitely creative solutions: new perspectives, new ways of handling stress, conflict, or negativity.

Even when an answer isn't what your ego wants, the problem has been lifted into a higher vibration and infused with love. That changes everything.

When we create from the heart, we don't just make something for this moment. We create across lifetimes, across solar systems, across dimensions. Heart-centered creation ripples into the past, present, and future simultaneously. That is what lasts. That is what matters.

### **Working with the Heart Holographic Field**

The heart's energy field is connected to the universal mind—to universal consciousness itself. It knows, it sees, and it holds the truth of everything. It's the great revealer.

When you work with the heart center, you're not just "thinking" about conspiracies; you're tuning into a source that can give clarity, accuracy, and sometimes even direct proof. The key is love. Love is the doorway.

You can't storm in with anger, ego, or determination and expect answers. The resonance of the universal mind is unconditional love. Unless you enter that space with humility and genuine love, the door stays shut.

Think of the heart as having a holographic field in front of you. Into this field, you can project any image or idea, even something you believe is unquestionably true.

As soon as you place it into that field, you'll get a response. The resonance becomes clearer, more vivid, and it starts to reveal details—showing you what's real and what's not.

You can even ask:

- What's the proof of this?
- Where can I find evidence?
- What is accurate here?

As you tune in, answers begin to emerge in very tangible ways. With practice, it becomes easier to do advanced work—like projecting a holographic field from your heart, moving your consciousness into it, and using it for energy work, travel, or communion with the universal mind.

But practice only works if you lower expectations. Trying too hard creates polarization. Just be. Even the emptiness is beautiful—it opens the doorway into higher vibration and into the universal mind.

### **Using Your Voice**

Another method is to speak directly into the field.

When you verbalize details of a belief, the resonance of your own voice interacts with the universal mind. The field instantly detects whether what you're saying is accurate or not.

You can even speak both sides of the dialogue—your thoughts, and then the response from the universal voice of truth. As you do this, you'll notice a powerful resonance, as if beams of light are radiating through you and outward into the universe. That's when you know you've tapped into something real.

This process can be applied to religion, politics, history, science, or any conspiracy theory. It doesn't matter. What matters is your willingness to surrender beliefs, even ones you've held your whole life.

Sometimes the universal mind responds with: "That's not how it really happened. Here's the truth." It may dismantle long-held ideas, reveal distortions, and point toward evidence or clarity you'd never considered.

This is not just about chasing conspiracies. It's about being willing to let love reveal truth.

The universal mind communicates through humility and unconditional love. If you enter with that presence, you'll find clarity that goes beyond manipulation, beyond fear, and beyond lies.

Have fun experimenting with this practice.

### **Meditation**

I know there are thousands of books out there on meditation techniques, so a lot of what I say might overlap. But here, I want to share a few principles specifically from the magnetic energy model. Take what resonates, use what helps, and let the rest go.

Energy is always flowing through us at a high rate. Meditation is about enhancing that flow and, at times, learning to gently decouple the physical and energy bodies for deeper experiences.

Meditation, when approached with magnetic awareness, is about clearing energy, strengthening the flow between your bodies, and expanding into higher levels of consciousness. And always, always—let your heart center be the guide.

Heart-centered meditation begins with awareness. Sit in stillness and bring your attention to your heart. Breathe slowly and deeply, imagining each breath flowing through the center of your chest. As

you do, you may feel warmth, expansion, or a sense of peace. This is resonance activating in your own being.

Unlike techniques that focus solely on the mind, heart-centered meditation shifts the foundation of awareness. Thoughts may still arise, but they are observed without attachment. The focus remains on love, connection, and openness. This creates a state where guidance flows naturally, without effort.

Through meditation, you can also connect with higher beings. Guides, teachers, and interdimensional allies are always available, but they communicate through resonance, not words. In meditation, the heart becomes the receiver. Insights, visions, or intuitive knowing may emerge, often subtle but profoundly clear.

Meditation also strengthens resilience. When disasters strike or chaos rises, those who practice heart-centered living remain calm. They act with clarity instead of fear. They know when to move, when to stay, and when to help others. This stability is a direct result of heart connection.

Daily practice is essential. Even a few minutes each day shifts your resonance. Over time, meditation becomes less of a practice and more of a state of being. You begin to live from the heart naturally, without needing to retreat into silence. Every moment becomes meditation in action.

Heart-centered meditation is not about perfection. It is about authenticity. Whatever arises—peace, sadness, or distraction—can be held in love. This honesty deepens the practice and strengthens connection to universal resonance.

In the age of Ascension, meditation is more than a spiritual exercise. It is survival. It aligns you with resonance, opens the flow of guidance, and anchors you in love. Through meditation, you become not only a participant in the shift, but a beacon for others. Living from the heart is the essence of Ascension, and meditation is the key.

Meditation is not about escaping reality—it is about aligning with resonance and living from the heart. It is one of the most powerful tools for navigating the transition with clarity and peace.

### **White Light Fire Meditation**

Part of this whole model is the integration of spirituality and technology. Magnetic energy naturally brings the metaphysical and the physical together. And in the same way, the human body is a system of energy—something we can influence, shift, and align with etheric forces.

In many traditions this is framed as creating with intention, but I like to think of it as using tools—etheric tools—that help us work with our energy fields. That's what this meditation is about.

The White Light Fire is a visualization tool you can use to clear and transmute energy—especially the emotional kind that gets stuck in your field. Think of it as a vortex of luminous fire surrounding you, neutralizing heavy emotions and redistributing that energy back into universal flow.

It's not just for this life, either. This visualization can be extended to your incarnations across time—past and future. In this way, the White Light Fire acts like a divine crucible, burning away residue across thousands of years of experience and returning it to Source in a balanced, neutral way.

### **Setting Up for the Meditation**

If you have tools like singing bowls, tuning forks, or crystals, feel free to use them—they help attune the body. Otherwise, all you need is yourself.

I usually recommend:

- Feet on the ground if possible, for grounding.
- A seated posture where your body can be still and relaxed. From a physical point of view, posture matters. Sitting upright usually makes it easier to clear energy and release blockages.
- But with this tool, movement is also fine—some people like to use their hands, stand, or even move through yoga or dance to amplify the fire visualization.

Do whatever feels natural.

### **Guided White Light Fire Practice**

Let's walk through it together.

Close your eyes. Take a few deep breaths. Let your body settle.

Visualize a column of white light flowing through you—down into the Earth, and up into the atmosphere. Feel it moving energy up and down, grounding and connecting you.

Now imagine a swirling White Light Fire, wrapping around your etheric body. Let it expand outward, clearing your aura, cleansing emotional residue, dissolving heaviness.

See this vortex move not only through your present self, but across all incarnations—past 12,000 years, and future 12,000 years. Each of those versions of you surrounded by this luminous fire, having their fields swept clean. Emotions transmuted, blockages released, everything returned to Source for neutralization.

## Expanding the Blessing

As you hold this visualization, see the White Light Fire extend across the planet. Every being—human, animal, all incarnations—blessed with this same cleansing.

Their energy fields cleared in accordance with the higher paths they've chosen. Their emotions transmuted. Their vibration raised.

You don't have to control it. Just set the intention, and allow the fire to flow.

## Closing

Stay in that energy for as long as you feel guided.

When it feels complete, simply return with the awareness: So it is, and so it shall be.

Thank you for joining in this practice. May it help you connect more deeply with source energy, with healing, and with the shift in consciousness our planet is moving through right now.

## Visualization

Visualization is a powerful tool. You can surround yourself with etheric geometries—a pyramid, a tetrahedron, a Merkabah, or simply a vortex of white light. These shapes act as energetic structures that focus, clean, and amplify your vibration.

Since they're etheric projections, you can encode them with intention. Healing, guidance, clearing, connecting with your higher self—it's all possible. The shapes can be crystalline, golden, pink, purple, or pure white—whatever your heart draws you to in the moment.

And you're not limited to just yourself. You might place that white light pyramid around your home, your neighborhood, or even your entire city. Follow your intuition. As your consciousness rises, so does your capacity to radiate that vibration outward.

Here's the beauty: in that expanded state, you can use visualization for service. Imagine the planet surrounded in high-frequency light. See a vortex of white energy over a city in need. Envision polluted areas being cleared, or zones of conflict being healed.

This isn't just "woo." From a magnetic energy point of view, you're contributing to raising vibration on both the etheric and physical levels.

## Circulating White Light Through the Body

A useful technique is circulating white light through the body: inhale it up your spine, then exhale it down the front of your body. This circulation raises vibration, clears blockages, and strengthens the pressure flow of energy through both the etheric and physical body.

If you feel any dull ache, tightness, or pressure—especially in your head—relax, breathe, and let light flow through that spot. That's how you dissolve the blockages we pick up from emotions, daily stresses, or the collective consciousness.

### **Astral Projection**

When meditating, keep your body perfectly still—even the micro-muscles. As you relax, the flow of energy strengthens, the pulse rate rises, and your energetic body begins to gain freedom from the physical body.

This is how experiences like astral projection or out-of-body travel become possible. Tools like binaural beats can help entrain your system to reach those states more smoothly.

Even if you don't leave the body, deep stillness and white light circulation expand consciousness beyond the physical. You start to sense the global field—tuning into humanity, the Earth, and beyond.

### **Dreams**

Energy flows through everything at all times, including us. So how does that impact your dreams? How does that affect lucid dreaming, visions, or insights you might receive in dream states?

When you meditate regularly, surrender, and allow the process to unfold, it changes you—and it changes your dreams. Before bed, I always recommend surrounding yourself with love and light energy. If you wake up at night, do the same. Place the intention that in your dream world you'll be held in love and light. If possible, tune into your heart center for a moment before drifting off. That vibration makes a difference.

### **Clearing Blockages for Better Dreams**

Our bodies are energy systems. The reason Tibetan monks meditate upright, for example, is because vertical posture allows energy to flow more freely. Small blockages in the head, face, or cerebral areas can dramatically alter dream quality.

Nightmares or dark dream experiences can often be traced back to these subtle blockages. Clearing them allows for more luminous, love-filled dreams.

One way to work with this is to try sleeping in a semi-upright position. Fully brace yourself, raise your chin slightly, and relax deeply. As you fall asleep like this, the energy can flow through and out of your head more easily, clearing blockages. Watch how the quality of your dreams changes when you try this.

### **Lucid Dreaming as a Tool**

Repeated meditation raises the chance of becoming lucid in a dream. Suddenly, you realize you're dreaming—you become the watcher.

There are simple tests you can try: Flying or levitating - if it feels heavy and difficult, your energy body may be weighed down by low vibration. If it feels light and effortless, you're in a higher state of energy.

At higher states, doors open. You may meet beings of light, ancestral guides, or see visions of the future. You may even observe magnetic energy units operating on other dimensional planes.

### **Using Sleep Cycles to Your Advantage**

If you can, try oversleeping occasionally—10 hours, maybe more. Then, in that semi-upright position, stay still. Completely still. Use gentle circular breathing. As your body relaxes deeply, you may feel vibration all around you.

This is a perfect entry into lucid dreams or meditative dream states. Similarly, if you wake up in the night and feel high energy or weightlessness, stay still, circulate white light around your body, and see if your awareness shifts into dreamscape or out-of-body states.

### **Letting Go of the Heavy Self**

Sometimes, in dreams, you'll feel heavy, unable to fly, burdened. One practice is to literally shed your old self. Watch your dream body fall away—like a snake shedding skin—and release the lower vibrational energy.

Afterwards, subsequent dreams often rise in vibration. Flying becomes easier. Encounters become lighter and more healing. Guides, angels, or higher beings may even assist in this shedding process.

### **Guidance vs. Control**

When lucid, it's tempting to try to control everything—where you go, what you do. That can be fun, sure, but the deeper value comes when you surrender.

Ask your higher self: Where am I meant to go? What am I meant to learn? Sometimes a doorway of light appears—walk through it. These experiences often bring profound healing or revelations.

### **The Power of Love in the Dreamscape**

Not every dreamscape encounter is pleasant. If you come across heavy or dark energies, surround yourself with white light. But above all—use love.

Love is the strongest tool, stronger than any shield or defense. In dreams, you can send it with your thoughts, your words, even by blowing it outward as light. Love neutralizes, transmutes, and dissolves whatever it meets. Nothing withstands it.

That's it for now. I hope this gave you some ideas for working with your dreams, and for making your dreamscape a space of higher guidance, healing, and insight.

## Affirmations

This topic presents affirmations for Ascension. Affirmations are not just words—they are vibrational intentions. When spoken or thought with sincerity, they align consciousness with resonance and support the transition into the new age.

Affirmations for Ascension are not about forcing belief. They are about allowing truth to rise within. Each statement reflects the reality of resonance, love, and interconnection. By repeating them, you strengthen your alignment with these truths.

Here are some simple affirmations. I invite you to read them daily — just for a few minutes, for a couple of weeks.

Don't try to force anything. Just notice how you feel. Do you sense more expansion? More connection? If yes, keep going. If not, no problem. You may have another role that's equally important. The universe doesn't make mistakes. Every piece of the puzzle matters.

Affirmations to guide the journey:

- I am aligned with the resonance of the universe.
- I release fear and live in trust.
- I am a being of love, and love flows through me in all that I do.
- I embrace the changes of Ascension with courage and grace.
- I am connected to the Earth, the cosmos, and all life.
- I welcome guidance from higher beings and universal consciousness.
- I live from my heart, in harmony with all.
- I release dissonance and embrace resonance.
- I am safe, supported, and guided during this transition.
- I am part of the new cycle of love, abundance, and unity.

Affirmations can be spoken aloud, written down, or repeated silently in meditation. What matters is sincerity and consistency. The more you affirm resonance, the more your consciousness shifts into alignment with it.

These practices are not about avoiding challenges. They are about meeting challenges with clarity and strength. When disasters strike, when systems collapse, affirmations remind you of the larger truth: that you are eternal, guided, and supported.

Affirmations also ripple outward. As you align your own consciousness, you contribute resonance to the planetary field. Every affirmation strengthens not only your journey but the collective journey of humanity.

Use these affirmations daily. Make them part of your morning, your meditation, or your moments of uncertainty. They are tools of survival, growth, and love. Through them, you embrace Ascension not with fear, but with joy.

Affirmations for Ascension are reminders of who you truly are—an interdimensional being of love, here to rise into resonance and take your place in the new age.

### **Affirmations on the Global Narrative**

This is about the global narrative unfolding around the world, and how it connects to metaphysical processes—visualization, interdimensional resonance, and what some might call “white light magic.”

In the etheric magnetic model of the universe, everything is interconnected across dimensions. Our bodies, our consciousness, nature itself—all of it is in constant resonance with energy flowing in and out of dimensions. If you’re firmly rooted in conventional science or the mainstream global narrative, this may not resonate. But if you feel guided, these practices may provide a way to contribute positively to the collective.

The goal here isn’t to alter anyone’s contracted life path, but to uplift the global organism of humanity—raising resonance, strengthening truth, and amplifying light.

### **Infusing Technology with Light**

All technology used to spread the global narrative—Internet, satellites, computers, phones, broadcasting stations, cameras, televisions, speakers, earbuds—is now engulfed in white light.

At an etheric level, this technology is embedded with crystallized light energy, resonating with unconditional love, peace, and truth. Anything dishonest or manipulative will clash with that resonance, creating dissonance that people immediately sense.

In short, the global narrative can only harmonize if it aligns with authenticity, honesty, and genuine truth.

### **Humanity Tuned to Discernment**

All people on Earth are surrounded and filled with white light. At an etheric level, every person now has a finely tuned “truth meter.” Lies, manipulation, and false data produce instant disharmony, sensed in body, mind, and spirit.

This tuning strengthens collective discernment—helping humanity collectively align with authenticity and higher resonance.

## Wrapping the Power Structures

Those who influence the global narrative—politicians, corporate leaders, media owners, scientists, military officials, pharmaceutical executives, board members, even hidden power brokers—are fully bound in white light.

Unbreakable white light columns penetrate their minds, hearts, and energy fields, embedding crystals in their throats and voices. Any dishonest or manipulative thought creates such strong dissonance that it cannot manifest into speech or policy.

Public policies rooted in dishonesty or harm are halted before they can even form. At the etheric level, low-vibrational intentions dissolve instantly, replaced by impulses toward truth, disclosure, and constructive action.

## Inviting Higher Assistance

An invitation is extended to higher beings of white light—guides, angelic presences, heart-centered beings with universal perspective—to assist humanity now.

Their role is to:

- Cleanse the planet of dark and low-vibrational energies.
- Block further infiltration of negative energies at physical, etheric, and astral levels.
- Guide humanity toward higher resonance, unconditional love, and authentic unity.

We recognize and thank them for their ongoing efforts, their shielding, their dedication, and their powerful assistance in guiding this transition.

## Holding the Visualization

- The narrative is now wrapped:
- Technology resonates only with truth.
- Humanity is blessed with light and heightened discernment.
- Power structures are infused and bound in unbreakable white light.
- Higher beings assist, shield, and protect the planet.
- At every level, lower vibrations are resisted, blocked, and dissolved—unable to manifest in thought, word, or action.

And so it is.

## Visualization

Let me leave you with a very simple visualization to help anchor this global acceleration of consciousness.

1. Imagine the entire planet surrounded and filled with brilliant, high-vibration light.
2. Imagine that same light as a vortex around yourself — clearing your physical body and your energy field.
3. Expand that vision to include all people, every life form, and the Earth itself — each surrounded by that same vortex of light.
4. Finally, direct that visualization to any specific place or situation on the planet that feels heavy or harmful. Picture it wrapped in white light, being transmuted and lifted back toward Source.

You can use a simple mantra if you like — “brighter, brighter, brighter” — to intensify the visualization.

Practices like this help us open to higher awareness, raise the planet’s vibration, and prepare for a future where technology enhances life rather than harms it, where consciousness and science walk together.

## Part 16: Final Perspectives

### Frequently Asked Questions on 2020-2030

This chapter presents a series of questions and answers about the coming years. These exchanges reflect both the uncertainty and the guidance that surrounds this period of transformation.

*Q: How many people will survive the coming changes?*

A: Survival will not be uniform. Some portions of the population (less than 2%) may not make it through, but survival is not the ultimate measure. Consciousness continues regardless of physical death. For those who do not survive the process, the perspective we were given is simple: they will return in future incarnations to a much better world. Or they will continue their journeys elsewhere. That doesn't diminish the seriousness of loss, but it reframes it in the larger cycle of life. While those who remain will help build the new cycle.

If this sounds alarming, I'm sorry. But we've been told again and again: this process is ultimately for the betterment of humanity and the planet. Even if it doesn't feel like it now, the outcome will be a higher consciousness, the development of magnetic energy technology, and a more sustainable, thriving world. And humanity can finally step into balance with the planet.

Everything happening is moving us toward a better future—even if the path there is rough.

*Q: Will we be helped directly?*

A: Guidance is already present. Higher beings are orchestrating events carefully. Direct intervention is limited, because humanity must learn and evolve through experience. But survival is not left to chance—support is constant, though not always obvious.

*Q: Is the timeline fixed?*

A: The general outline is fixed. The pole shift, the collapse of dissonant systems, and the rise of resonance are inevitable. However, details such as the intensity of disasters or the number of survivors can shift based on collective consciousness. Humanity's choices influence the severity of the transition.

*Q: Why this decade?*

A: The cycle of transformation converges in this timeframe. The weakening magnetic field, the decline of electricity, the pole shift, and Ascension all intersect. Prophecies, scientific indicators, and interdimensional guidance point to this period as the threshold. It does not mean everything ends in this decade—it means the shift locks in, and from there the new cycle accelerates.

*Q: Is there hope?*

A: Absolutely. The coming years will be difficult, but they are not the end. They are the gateway to a higher cycle of life. The suffering of the transition is temporary, while the expansion of consciousness is eternal. Hope lies not in avoiding change, but in embracing it.

This timeline is not about doom—it is about transformation. It is the year when humanity steps into a new cycle, one that has been foretold across cultures and ages. The questions may be filled with fear, but the answers always return to the same truth: this is not the end of life, but the beginning of a greater reality.

### **Universal Dimensions and Guidance**

This chapter explores universal dimensions and the guidance available to humanity during Ascension. The universe is not limited to the three dimensions of space and one of time. It is an intricate spectrum of frequencies, each representing a dimension of existence. Humanity is now awakening to this greater reality.

Every dimension vibrates at a unique frequency. What we perceive as physical reality is only one narrow band of the spectrum. Beyond it exist countless realms, populated by beings of higher awareness. These beings interact with us, often unseen, offering guidance through resonance. They are not separate from us but are part of the same universal family.

Guidance flows constantly, but it must be received through the heart. The mind, with its noise and analysis, often blocks this connection. When the heart is open, however, guidance is clear—appearing as intuition, synchronicity, or direct knowing. Meditation, stillness, and love attune us to this flow.

Dimensions also interact with the spectrum of color and energy. What we see as visible light is only a fraction of the electromagnetic spectrum. Beyond it exist frequencies of sound, color, and vibration that influence life profoundly. As humanity ascends, we will perceive more of this spectrum directly, seeing colors and energies that were once invisible and feeling dimensions that were once inaccessible.

Universal guidance also comes through nature. The rhythms of Earth, the movement of stars, and the patterns of ecosystems all reflect the larger order. By paying attention, we align ourselves with that order. Nothing in nature is random—it is all resonance expressing itself through form.

During Ascension, higher beings guide humanity carefully. They cannot interfere completely, because free will is essential. But they ensure survival by orchestrating events, seeding technologies, and offering constant support. They remind us that we are not alone and never have been.

Exploring universal dimensions means expanding beyond fear. The unknown is not to be dreaded but embraced. Every dimension is an expression of love, experienced through different frequencies. As humanity opens to this truth, we will recognize ourselves as interdimensional beings, living simultaneously in multiple realms of existence.

Guidance is always present. It comes through dreams, intuition, synchronicity, and even direct encounters. The key is openness. When we live from the heart, we are never lost, for the universe itself is guiding us.

Universal dimensions and guidance reveal the larger context of Ascension. This is not just a planetary shift—it is a universal awakening. By embracing resonance, humanity steps into the greater family of consciousness, guided by love, supported by higher beings, and aligned with the flow of creation itself.

### **Global Revolution and The Way Forward**

This chapter explores the global revolution that is unfolding and the way forward for humanity. The changes we are witnessing are not isolated events—they are part of a coordinated transformation, marking the end of an old cycle and the birth of a new one.

The revolution is not merely political or economic. It is a revolution of consciousness. As resonance rises, secrecy, control, and dissonance lose their power. Governments, corporations, and institutions built on deception will collapse. Transparency will replace secrecy, truth will replace lies, and love will replace fear.

Technology will also be revolutionized. Artificial Intelligence and transhumanism, though often promoted as solutions, will be exposed for their limitations when driven by dissonance. In the new age, only resonance-based technologies will endure. Plastics will be magnetized for reintegration into natural systems, water will be restructured for vitality, and space travel will be made possible through magnetic propulsion. Engineering, medicine, and every field of science will transform as resonance becomes the foundation.

The medical industry, one of the most controlling and profit-driven systems today, will collapse under its own weight. Magnetoceuticals and resonance-based healing will replace pharmaceuticals. The suppression of true cures will end, and humanity will finally experience health as the natural state.

Social structures will also undergo revolution. Wealth disparity will dissolve as abundance becomes universal. Religions will shift from dogma to direct spiritual experience. Communication with animals, recognition of their consciousness, and harmony with nature will become part of daily life. The false

divisions that separated humanity will no longer hold.

Revelations will be central to this revolution. Secrets long hidden will come to light—technologies suppressed, extraterrestrial presence concealed, and truths about humanity's past deliberately distorted. This unveiling will shock many, but it will also liberate. Knowledge is power, and once truth is revealed, it cannot be buried again.

The way forward is clear: humanity must embrace resonance, live in love, and trust the orchestration of the universe. Fear will attempt to cling to the old, but it cannot stop the new. The global revolution is already underway, and nothing can halt it.

In the end, this is not about destruction but renewal. The collapse of dissonant systems paves the way for a civilization rooted in harmony, abundance, and consciousness. The way forward is not about control but about freedom. Not about survival alone, but about thriving in love.

The final message is simple: live in love. It is the essence of Ascension, the core of resonance, and the guiding principle of the new age. The global revolution is humanity's way forward, and love is the path.

## Part 17: Magnetic Energy Units

More information on the units is available at <https://magneticenergy.org/>

### The Magnetic Energy Pump

- Scalable to any size.
- Runs on neutral magnetic current.
- Can be used in shallow wells but draws water from far below typical water tables.
- Provides access to an almost unlimited supply of fresh water deep inside the Earth.
- Can work anywhere—deserts, dry regions, you name it.

### The Water Purifier

- Also scalable. The original unit stood about five feet tall and could handle good volume.
- Cleans groundwater, river water, lake water—any source.
- Can desalinate ocean water at very low cost. That alone could solve water scarcity for coastal regions.

### More Advanced Options

- Replicating or assembling water out of etheric energy.
- Reformulating existing bodies of clean water into as much supply as needed.
- Yes, this sounds futuristic, but it's possible with the same principles.

The point is, with magnetic technology, there is always a solution.

And here's the kicker: **every drop of water that touches these units becomes magnetically conditioned.** That water gains a neutral magnetic component that changes everything it touches.

- In agriculture: plants grow stronger, healthier, organically, without chemicals.
- In animals: immune systems become robust, eliminating the need for steroids or drugs.
- In humans: vitality, energy, faster healing, improved health, even consciousness shifts.

This isn't just water—it's a supercharged life force.

### Magnetic Attractor & Converter

This model involves what could be called a magnetic attractor and converter. Essentially, any object — regardless of its chemical composition — can be attracted or repelled by etheric magnetic fields. That's because in this model, all molecular structures are open systems, with energy flowing in and out continuously. If you hit the correct resonance and pulse rate, you can create an attract field to pull in any chosen material.

With plastic, things get interesting. Plastic has many overlapping chemical compounds, but when bombarded with pulsing neutral magnetic fields at the proper resonance, its chemical bonds unlock. In effect, the plastic breaks down into nothing. It's a safe, room-temperature nuclear reaction.

As the device processes one type, that signature gets added automatically to the field. Over time, the device builds a catalog of resonances and becomes more effective at attracting multiple forms of plastic.

But there's a caveat: plastics share chemical similarities with natural compounds in water and living beings. So the technology must be precise enough to differentiate plastic from overlapping compounds before it can safely blanket-convert everything. Otherwise, you risk disrupting natural chemistry along with the plastic.

### **How It Works in Practice**

Imagine a floating device in the ocean. Within a one-mile radius (or more, depending on field strength), it attracts plastic toward itself. Once inside, the device breaks the plastic down and converts it to neutral energy.

Here's the key: the inflow of the field not only breaks down plastic, it also attracts more of it into the device. Thousands of such devices could be deployed across the oceans, controlled wirelessly, continuously pulling in and neutralizing plastic.

Advanced versions of this technology could go further — not just attracting and breaking down plastic, but converting it directly within the medium (the ocean, a landfill, or soil) in real time.

Still, the vision is clear: magnetic attractor-converter technology could transform our environment, restore ecosystems, and heal the damage caused by decades of plastic pollution.

### **Mini Romag Generator**

This gateway unit is scalable and can lead to an unlimited number of inventions. A few points about this Generator:

- Runs on free energy provided by magnets and the earth's magnetic energy
- Produces magnetic current equivalent of 3-1/2 volts and 7 amps
- Requires startup of 2100 RPM for 42 seconds
- Suggested use for generator: charging magnetic battery, powering small magnetic devices like a magnetic water pump
- Does not produce pollution
- Designed to recycle magnetic energy to help save environment
- Materials necessary to construct generator are readily available
- Requires a load to maintain continuous operation

## **Romag Generator**

Romag Generator runs on renewable energy or free energy that is derived through magnets and the magnetic field of the Earth. This gateway unit is scalable and can lead to an unlimited number of inventions. A few points about this Generator:

- It produces magnetic current equivalent of 50 H.P. output.
- Suggested use for generator is running free energy magnetic devices including the Magnetic Water Pump and the Pyramid Molecular Vibratory Exchanger Unit.
- It does not create pollution, so it is beneficial to the environment
- It is designed to recycle magnetic energy back into the Earth's energy system.
- It requires startup spinning to achieve 1850 RPM.
- It requires special sintered magnets.

## **Pyramid Molecular Vibratory Exchanger Unit**

This gateway unit is scalable and can lead to an unlimited number of inventions. This unit provides the principles necessary for replicating and neutralizing matter. A few points about the Pyramid unit are as follows.

- It runs on magnetic energy provided by Romag or Celestial Particle Transmuter.
- It uses free energy to form sound waves and magnetic vibrations to function.
- Its circuitry is designed to recycle energy after it uses it.
- It does not create pollution, so it is beneficial to the environment.
- Actual pyramid is made of acrylic and is located between two large spinning magnets of specific composition.
- It demonstrates that magnetism holds molecules together and that magnetism is the property that unlocks the molecular lock of molecules.
- Living matter inside pyramid becomes unseen.
- Pyramid machine can assist in the exploration of uses and properties of magnetic energy.

## **Magnetic Cold Fusion Motor**

This gateway unit is scalable and can lead to an unlimited number of inventions. Some noteworthy points about the Cold Fusion Motor are as follows.

- It harnesses free energy from the environment.
- It works with a form of magnetic energy that is clean and renewable.
- It produces magnetic energy equivalent of 12 H.P.
- It is designed to power several Magnetic Oscillating Water Purifiers to convert salt water to fresh water.

- It requires mechanical startup.
- It requires palladium plates.
- It proves that it is the misuse of nuclear energy when radioactivity results.

### **Magnetic Light Box**

This gateway unit is scalable and can lead to an unlimited number of inventions.

- Free energy specially wired Acrylic Light Box that accepts magnetic current and causes it to manifest as light.
- This light does not create pollution, and will help save on utilities.
- This light is excellent for the environment, for people, animals, and plants.
- This light is designed to recycle magnetic energy safely and efficiently back into the Earth's energy field.
- Suggested uses – Lighting for structures: Buildings, Greenhouses, Homes, etc.
- Requires the Magnetic Current Generator to power the Light Box.

### **Magnetic Current Generator for Light Box**

This gateway unit is scalable and can lead to an unlimited number of inventions.

- Free energy device produces magnetic current for lighting magnetic light devices.
- Suggested use – will light six light boxes in homes, businesses, greenhouses, etc.
- Generator will recycle energy safely to repair environment.
- Generator does not create pollution, so it will help repair the environment.
- Requires Manganese Silicate (Rhodonite) inside the unit.
- Requires mechanical startup.
- Consists of two rotors turning opposite directions simultaneously.

### **Magnetic Piston**

This gateway unit is scalable and can lead to an unlimited number of inventions. Here are some points about the Magnetic Piston.

- It uses free energy derived from the renewable resource of magnetism and the Earth's energy field.
- It does not generate any pollution, so it will help the environment.
- It is designed to recycle energy back into the environment to conserve natural resources.
- It operates at 5600 piston strokes producing 7 HP per piston.
- No exotic materials or alloys are required for piston.
- It requires strong iron/boron/neodymium magnets.
- It is useful in ground transportation, water transportation, and air transportation.
- It requires mechanical startup.

- It provides magnetic current to power magnetic devices, drive magnetic motors, etc.

### **Magnogen Engine**

This gateway unit is scalable and can lead to an unlimited number of inventions.

Notes on this engine:

- It is a free energy 480 HP Magnetic Powered Engine that turns at 4,800 RPM.
- It does not create pollution.
- It is designed to recycle energy to maximize efficiency.
- It can help clean the environment by reducing pollution.
- It requires mechanical startup.
- Suggested use for engine: automobile transportation, industrial transportation, air transportation, water transportation.
- Special magnets are needed to retard the generation of spark.
- It has speed controls, so it does not need a gear box to run a vehicle.
- It can help conserve natural resources like oil.

### **Tialco-B Metal**

This metal has unlimited applications and will help create a new industry of advanced materials.

Notes on the Tialco-B metal:

- It welcomes magnetism, yet is nonmagnetic (meaning a magnet will not adhere to it).
- It does not get polarized into a given magnetic charge making it ideal for assisting in the attraction of neutral magnetism.
- It is designed to work in free energy motors, generators, and other units.
- It can assist in reducing pollution, cleaning the environment, helping recycle energy and waste, providing transportation, generating energy, and powering space flight.
- It is light in weight, yet has the strength of steel.
- It has a zero coefficient of thermal expansion when heated or cooled.
- It has a CRYSTALLINE five-fold symmetry structure that would require extremely high heat to melt.
- It has been classified as “Quasi-Crystals”, a new phase of solid matter that is neither crystalline nor amorphous.
- This metal when under stress, will not exhibit disruptive seaming.
- This metal can be used as a coating on other metals, making the coated metals considerably stronger.

## Celestial Particle Transmuter

This gateway unit is scalable and can lead to an unlimited number of inventions.

- Celestial Particle Transmuter captures free energy from environment, specifically the ionosphere.
- It produces vast amounts of neutral flowing magnetic current for numerous uses.
- It harnesses a natural renewable resource of energy to help conserve natural resources.
- It is designed to recycle the magnetic energy it produces to maintain an energy balance in the Earth's magnetic field, unlike electricity.
- It does not create pollution, so it is beneficial to people and the environment.
- It requires special alloy TiAlCo-B to function.
- It is capable of powering four 10 HP Magnet Motors.
- It provides magnetic energy that can be transmitted through space.
- It requires mechanical startup.

## Magnetic Motor

This gateway unit is scalable and can lead to an unlimited number of inventions.

- It runs on free energy provided by the energy field of the planet.
- It is powered by the magnetic current generated by the Celestial Particle Transmuter.
- It does not produce pollution.
- It is designed to recycle the energy it uses to conserve natural resources and maintain a balanced energy field on this planet.
- It can be constructed in various sizes for greater output.
- It produces 10 HP.
- It is useful in numerous applications including transportation, industrial uses, residential uses (for example it can power a fan to be used with the Magnetic Heating Unit).
- It requires special alloy TiAlCo-B to function.
- It requires mechanical startup.

## Magnetic Heating Unit

This gateway unit is scalable and can lead to an unlimited number of inventions.

- Magnetic Heating Unit runs on free energy provided by the planet's energy field that is circuited through a magnetic energy generator.
- It can use magnetic current from the free energy Celestial Particle Transmuter.
- It does not generate pollution, so it is beneficial to the environment.
- It is designed to recycle free energy after using it to help maintain a balanced energy field on our planet.

- It can heat average home, office, green house, etc.
- It requires special alloy TiAlCo-B to function.
- It produces heat without spark.
- It can boil water.
- It demonstrates nuclear fission without harmful radiation.

### **Magnetic Spaceship**

This gateway unit is scalable and can lead to an unlimited number of inventions.

- Spaceship captures free energy from the Universal flow of energy.
- It operates on various forms of magnetic energy.
- It does not create pollution.
- It does recycle energy back into the Universal energy flow while functioning.
- It demonstrates how to fly a vehicle without thrust.
- It is capable of atmospheric transportation and interstellar transportation.
- It utilizes gyroscopic lift principle for travel.
- It uses Universal principle of attract-attract.
- It generates force field for flight.
- It generates on board gravity field.
- It requires special alloy TiAlCo-B as well as several magnetic devices.

## **Our Future**

The years ahead mark the closing chapter of ignorance and the opening of an enlightenment cycle. Something is already happening in the realms just beyond our visible dimension. That activity has been underway for some time, but it's now ramping up—and throughout this decade, it will increase dramatically.

Humanity will not only endure the coming changes—we will emerge as something greater, as conscious, heart-centered beings aligned with the universe.
